# Give voice to your ideas with Speech-to-Text

Use AI to create professional grade transcriptions and captions across 140 languages and variants

Quickly build voice projects for marketing, blog posts, e-learning, ads, IVRs, and more...

BitFractal leverages cutting edge technology to transform natural voice clips into transcriptions and captions to be used for promos, ads, social media posts, news, corporate trainings, e-learning and many other applications.

With the BitFractal STT API integration has never been easier. Add voice to your solutions using REST API, Power Automate, Zapier, Logic Apps, and more.

BitFractal is available in different plans to meet the needs from individuals to large organizations and published for immediate use on Microsoft AppSource and Azure Marketplace.

AI brings the future to organizations
