

# BITFRACTAL

AI FOR BUSINESS MADE SIMPLE

## Give voice to your ideas with Text-to-Speech

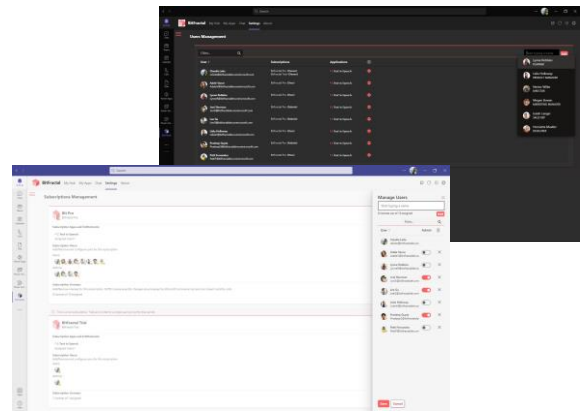

Use AI to create professional audio segments using 330+ neural voices across 129 languages and variants

**Quickly build voice projects for marketing, blog posts, e-learning, ads, IVRs, and more...**

BitFractal leverages cutting edge technology to transform text scripts into natural voice clips to be used for promos, ads, social media posts, news, corporate trainings, e-learning and many other applications.

BitFractal is available in different plans to meet the needs from individuals to large organizations and published for immediate use on Microsoft AppSource and Azure Marketplace. Soon to be available to be installed directly from within Teams.

**Cloud-based Software-as-a-Service Solution**

Born in the cloud using the best of AI to deliver a solution for individuals or companies with simplicity. No installations or downloads required.

**AI Cognitive Services**

Backed by Microsoft Azure Cognitive Services, BitFractal delivers neural voices clips that can be customized with speaking styles to produce professional content that looks just like humans.

**Collaboration and Productivity**

BitFractal runs on Microsoft Teams to add and enhance collaboration and productivity for the entire organization while building voice projects.

**Meet users where they are**

BitFractal was designed to be available for all users in their flow of work. As an App, a bot, as part of a team chat, or as collaborative tab on a channel, BitFractal is wherever the user is.

AI brings the future to organizations
