

Security Workshop

How do you secure data from your customers and business partners? How well can you track this data? Do you know who currently has access? Do you know your strengths and weaknesses in cyber security? How do you protect yourself against targeted attacks?

You are not alone with these questions. We invite you to our Digital Transformation Workshop with a focus on cyber security. With cyber security solutions, you promote the trust of your customers. We are sure that your company has already invested in cyber security. But how can you react correctly and quickly in an emergency? How do you protect yourself against unknown attack methods? These considerations are central to Microsoft's cyber security strategy.

Learn how to protect your business against threats with Microsoft 365 in our interactive Security Workshop.

Cyber security has become very important in many business areas and is by no means the sole concern of IT. We look forward to participants from different disciplines and adapt the content to your needs.

Agenda Security Workshop

The workshop lasts about 3 hours.
