How to Extract cPanel Email Addresses in Bulk?

1. Download and launch the software and then select the required email client from the list.

2. And then, enter the login details of the email service.

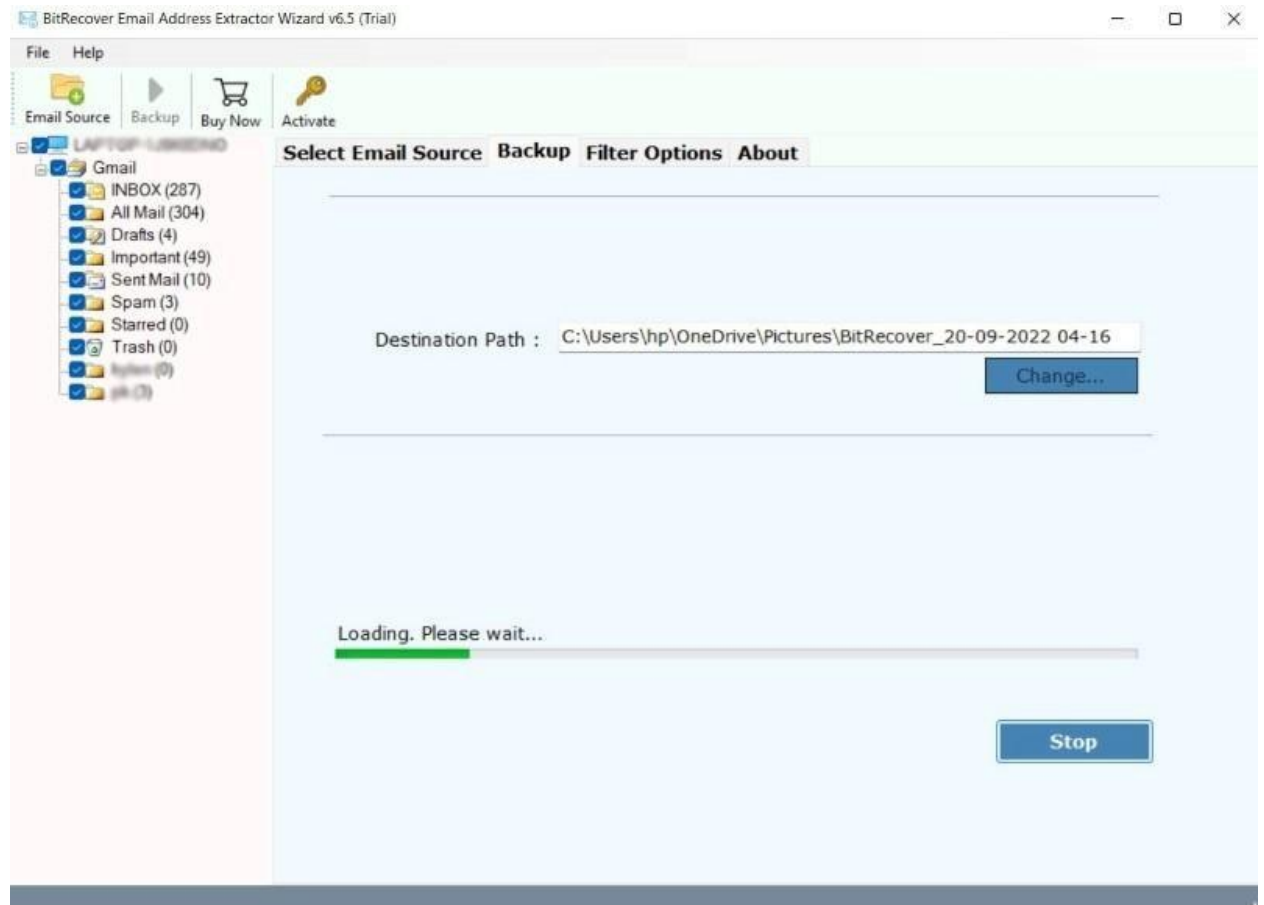

3. Next, for extracting email addresses from cPanel at once then enable the "Use Batch Mode" option and if you are using a proxy server then enable the "Use Proxy" button and hit the "Login" button.
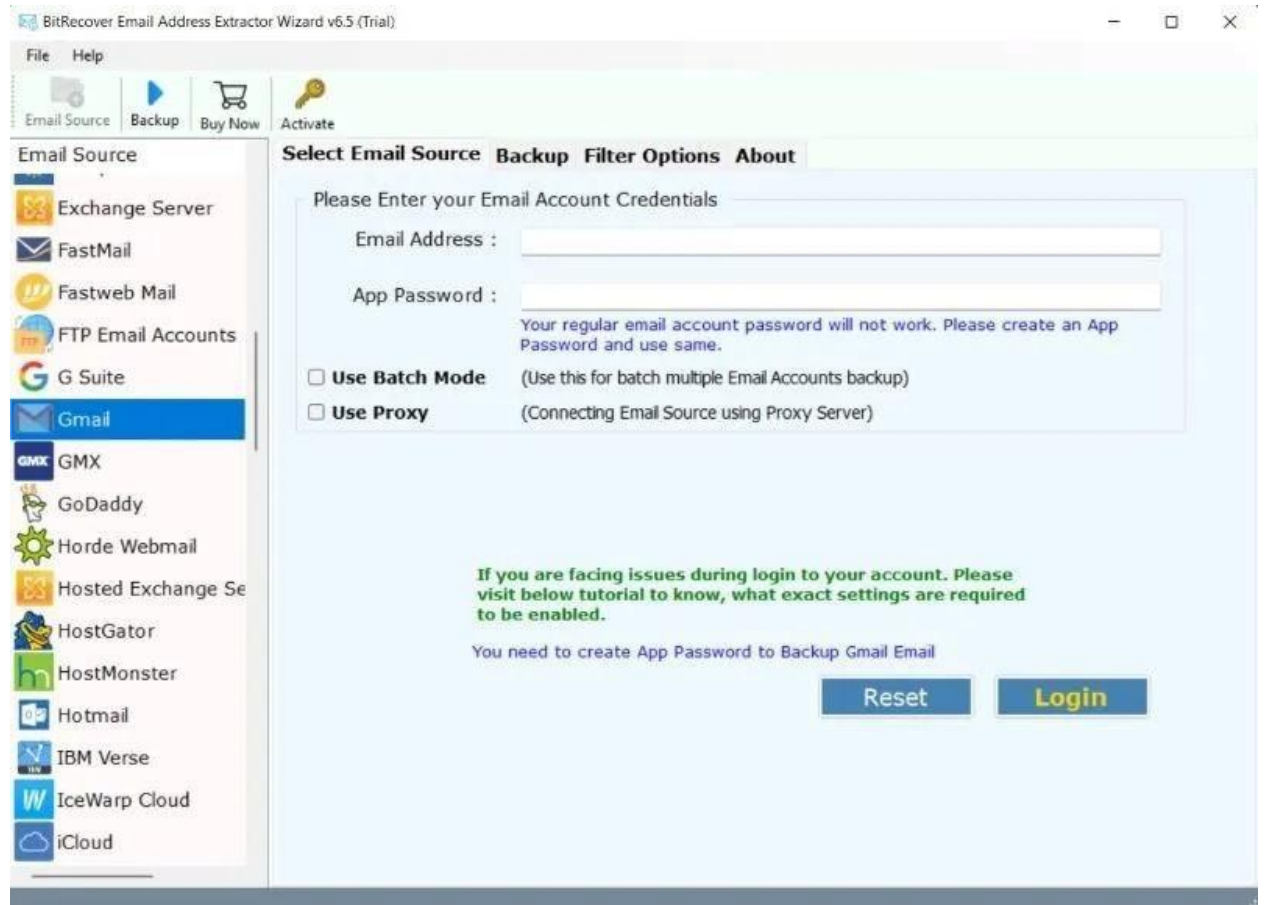

4. Now all the data will appear on the software panel and choose the required data from here.
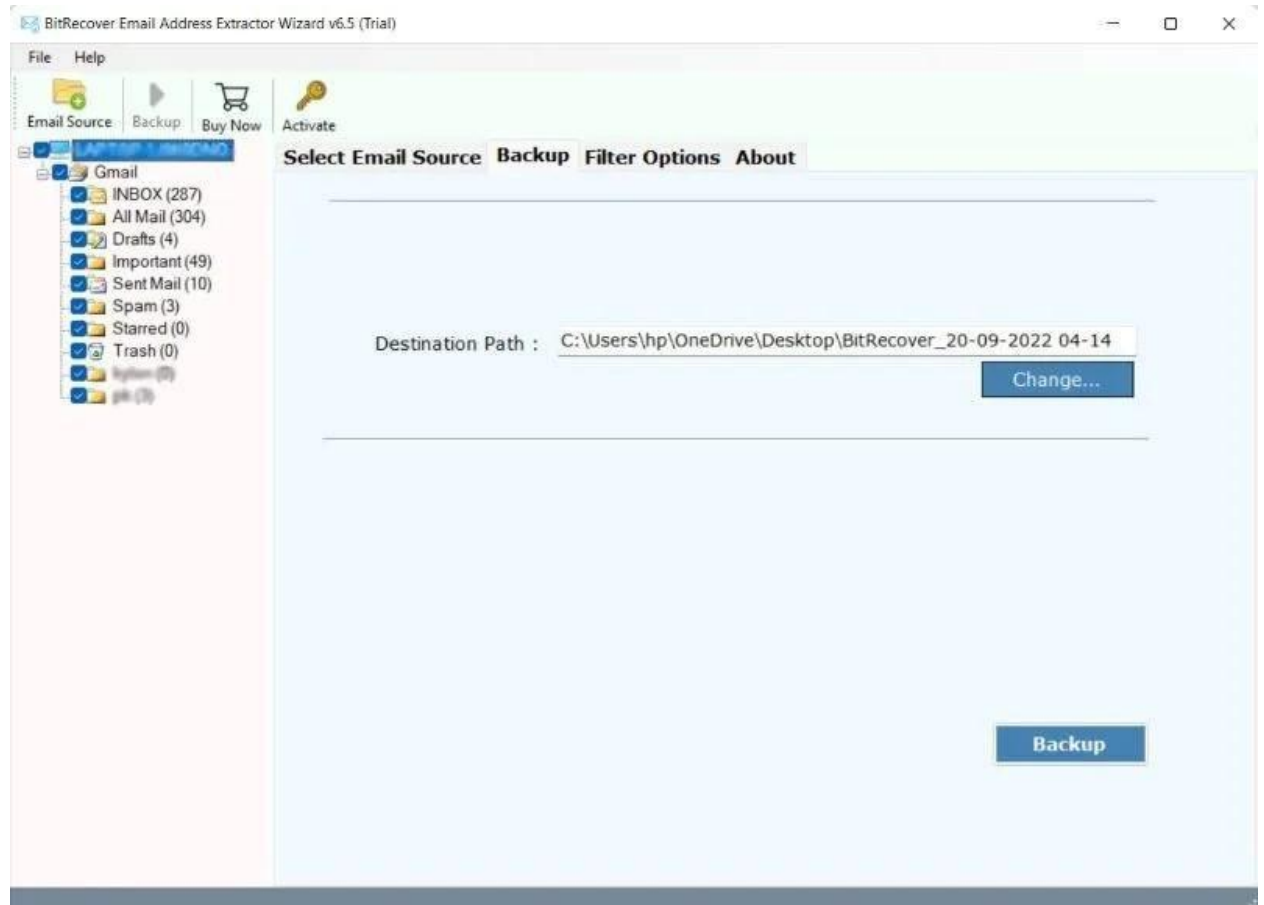

5. Lastly, select the destination path and then click on the "Backup" icon to start the process.

Conclusion

Overall, BitRecover cPanel Email Address Extractor make it easy to collect email addresses from cPanel as well as 90+ services. With batch extraction and advanced filters users can quickly save email IDs in a CSV file. Simply log in, select data and extract addresses in just a few clicks.
