

Microsoft 365 Services Migration

Why Bitscape

We help businesses do more with their technology investments by improving user experience and productivity. Security, compliance and automating processes are the core offerings of Bitscape with industry specific solutions.

Different business goals and infrastructure specifics require different methods of migration. To meet the needs of our customers, we have formed our migration strategy to help them achieve a complete cloud adoption journey.

Pre-migration activities

We will perform deep analysis of your existing environment to detect software dependencies and mitigate them before performing migration. We also evaluate the current architecture and streamline the process.

Integration with other cloud solutions

Post-Migration, we can help you integrate your new Office 365 deployment with other cloud or on-premises applications. Integration allows the users of CRM, ERP, BI, project management and other systems to collaborate in a well-organized and secure way. Integration also lets companies centralize content management and have better control over cross-system business processes.

Post-migration training

We provide training for business users and IT specialists through a well architected process while delivering future recommendations on how to make the infrastructure most efficient.

Post-migration support

Bitscape Support team are always thriving to solve and remediate customers queries. This is achieved by Microsoft 365 managed services.

Bitscape M365 Migration and Management Services

Take your enterprise to the next level with Microsoft 365. Discover the benefits of an integrated cloud platform that delivers industry-leading productivity enterprise features along with intelligent cloud services and world-class security.

Microsoft 365 Migration Model we provide.

We offer various pathways to migrate your business to M365.

● Migrate mailboxes from Exchange Server

Migrate all mailboxes at once (cutover migration) or Express migration.

Migrate mailboxes in batches (staged migration).

Migrate using an integrated Exchange Server and Microsoft 365 or Office 365 environment (hybrid).

● Use the Import Service to migrate PST files

If your organization has many large PST files, you can use the Import Service to migrate email data to Microsoft 365 or Office 365.

● Migrate email from another IMAP-enabled or Thirdparty email system

You can use the Internet Message Access Protocol (IMAP) to migrate user email from Gmail, Exchange, Outlook.com, and other email systems that support IMAP migration such as IBM Lotus Notes.

Benefits of Migrating to Microsoft 365

Migrating to Office 365 is an important strategical step for companies that want to rebuild their infrastructure.

Migration to Office 365 allows organizations to get a variety of benefits:

Optimized infrastructure.

By switching to the cloud, organizations can get rid of heavy server-based environment and rethink the load of their IT departments, thus dedicating more time to such critical issues as user adoption.

Managed support and maintenance.

With Office 365, companies can minimize the effort they spend on supporting their solutions, thus focusing on their business activities rather than on software issues.

Productive collaboration capabilities.

Starting their cloud experience, companies can provide employees with numerous collaboration options, including shared team sites, group-based conversations, chats, video conferencing, and more.

Centralized cloud environment.

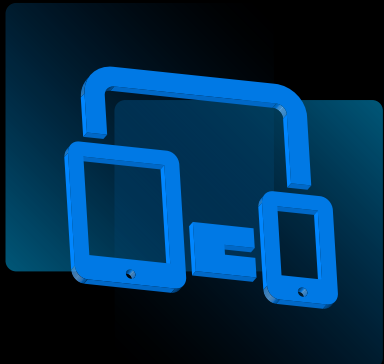

For companies that use other cloud solutions, adopting Office 365 can be the right way to bind together different systems and bring fully fledged collaboration and content management to any cloud application employees work in.

Microsoft 365 Management Services

Many businesses often require additional optional components which provides better management capabilities. Bitscape provides the following security and Management functionality inside Microsoft 365. Harness organizational knowledge and capabilities with Migration services, Endpoint Management and Business Protection.

Device Management (Intune & Autopilot).

Device management enables organizations to protect and secure their resources and data, and from different devices.

Windows Security & Licensing (Windows Enterprise / Business).

The need for licenses are different across organizations. Bitscape helps in delivering the most suitable licenses for your business needs.

Document Rights Management (Information Protection).

Control and help secure email, documents, and sensitive data that you share outside your company. Information protection service will help enhance data protection no matter where it has stored or who it has shared with.

AD Premium (MFA & Conditional Access).

The modern security perimeter now extends beyond an organization's network to include user and device identity. Organizations can utilize these identity signals as part of their access control decisions.

Multi-factor authentication provides extensive security when prompted during the sign-in process for an additional form of identification, such as to enter a code on their cellphone or to provide a fingerprint scan.
