BIZTUP Data Warehouse for Dynamics 365 F&O and Dynamics AX

We understand that getting timely and accurate information from Dynamics 365 F&O or AX is key to your business success. Our solution is aimed to make this task much easier.

BIZTUP DATA WAREHOUSE for DYNAMICS 365 F&O and Dynamics AX is a plug and play data warehouse solution which can be used to support all your Dynamics 365 F&O or AX2012 reporting requirements. It extracts key Dynamics 365 F&O or AX data, transforms into optimal structure for reporting and loads into a data warehouse.

Why customers use BIZTUP DW for Dynamics 365 F&O and Dynamics AX

- No need to bother with complex table relationships
- Dimensions and measures that make sense to business users
- Built in financial dimension handling and multi-company capabilities
- Reliable and fast technology

Comprehensive reporting

- Data structure mirrors business processes
- Covers five major business domains
- Extensive drill-down capabilities

Faster reporting with prebuilt KPI's

Robust infrastructure

- Built on Azure/on-premise SQL tools
- Extensive logging and load metrics
- Runs either on-premise or in the cloud

Easy maintenance for the IT department

Real time data capabilities

- Incremental updates
- Near real time data load
- Optimized for performance

Real time data; no need to wait for daily loads

# BIZTUP Data Warehouse for Dynamics 365 F&O or Dynamics AX Key Concepts

Comprehensive reporting

- 5 Data domain, 60+ dimensions with 200+ attributes, 200+ measures and calculations
- Usual pain points like financial dimension handling or multi-company reporting is handled out of the box
- Provides key KPIs and extensive drill down capabilities
- Data structure is designed with reporting performance in mind and to make sense to business users; naming convention follows D365 or AX naming convention for easier interpretability
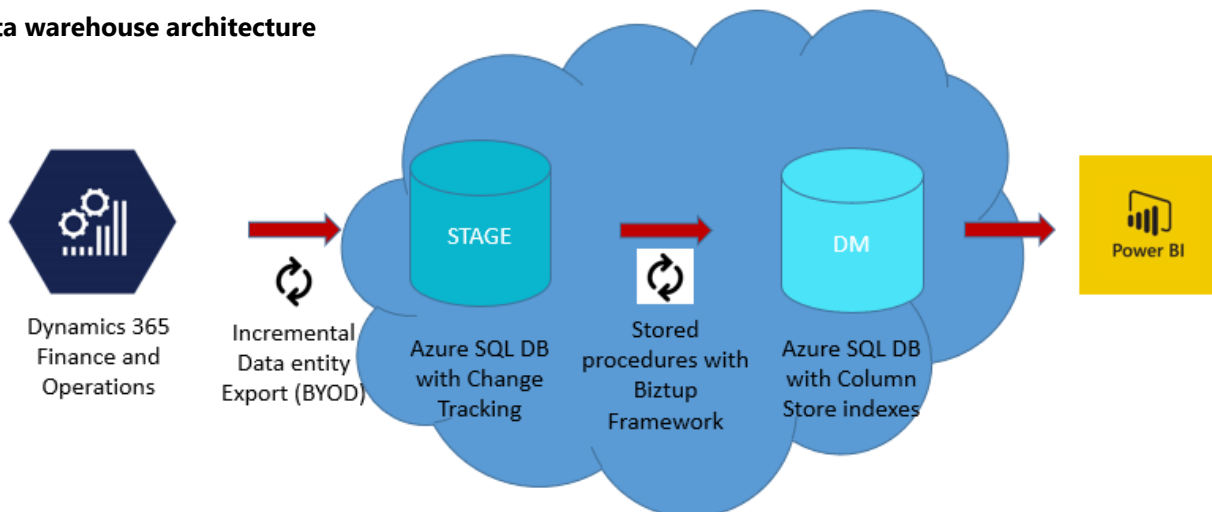

Easy implementation

- Implementation is easy and fast because no upfront analysis is needed; the content covers all common business scenarios and usual reporting requirements
- Built with standard SQL tools
- Easy to extend with basic SQL knowledge
- As a Dynamics / BI consultancy with decades of experience, we are glad to help for an even smoother implementation experience

Robust technology

- We offer two possible architectures based on your preferences
    - "Traditional" data loads based on SQL script – simple architecture but longer load times; suitable for on premise only
    - Transactional replication technology is used to do immediate incremental loads very quickly. Multi-hour loads are reduced to seconds. Suitable for on premise and cloud as well
- Support both multidimensional and tabular model
- Extensive logging and load metrics to help effective troubleshooting

Our data warehouse architecture

Why BIZTUP?

Biztup has deep expertise in both Microsoft Dynamics products and Business Intelligence / Data Warehousing. We keep customer value in our focus and use a holistic approach which ensures that people, processes and technology work in sync towards positive business results.
