Blackbook ai

At the end of Blackbook ai's Azure **Data Migration Assessment** you will gain:

System Dependencies

Understand dependencies between your workloads. This will assist to identify and prioritise the migration waves.

Compliance Needs

Understand the workloads to assess the digital compliance requirements. This will help whether you should consider public, private, hybrid, or a combination.

Technology Implications

In cloud adoption approach, identifying legacy system and validity of the adoption is the key. Identifying technology concerns for legacy and non-legacy systems before planning the migration strategy.

Infrastructure Needs

The collected information will guide and provide a better picture of the infrastructure considerations, cost estimates, level of effort, timelines and resources required.

Blackbook ai
