- Identity and Access Management: for on-premises & cloud-based assets.
- Data Loss Prevention and Protection
- CIS Benchmark Assessment and Remediation
- Managed SOC (Security Operations Centre) Services
- SIEM Solution implementation
- Device Encryption and Mobile Device Management
- Endpoint Protection

Advisory Services

IT and Security Professionals have the enormous task of protecting company information and data assets. We know it is impossible to be 100% secure all of the time, especially with ever-increasing digital real-estate. The good news is that there are certain focus areas that warrant prioritisation, as they deliver high-value gains in security improvement. These are the quick wins that become the baseline of evidence, needed to comply with organisational and Industry governance requirements. Blackhill has helped many organisations over the last 7 years, to identify priorities that deliver real progress in achieving an improved security posture.

Technology Readiness and Optimization Assessments

The modern business needs an agile IT organisation able to expertly navigate the narrow space between collaboration and security.

Cyber Security

- Maturity Assessment and Gap analysis
- Risk mitigation and remediation Roadmap
- Business Case development for Cyber Security Investment
- Identity and Access Management
- Device Encryption and Mobile Device Management
- SIEM solution Implementation
- Data Loss prevention
- Endpoint Detection and Response
