

Modern Data Estate on Azure

The foundation for successful Digital Transformation

Azure offers unparalleled agility, on-demand scaling, and unlimited computing availability to provide your company with an unshakable data infrastructure. As a foundation for all of your Digital Transformation strategies, Blueprint helps you utilize Azure’s industry-leading services to accelerate your ability to adapt faster, innovate better, and grow more efficiently.

Impact

-  Combine disparate data sources for holistic analytics and reveal new opportunities for growth and transformation.
-  Enable batch analysis of large-scale historical data sets to deliver insights not possible via any other means.
-  Establish a foundation for data scientists to explore more data with reduced friction.
-  Provide faster, easier access to data with less manual aggregation/ETL, resulting in time and cost savings.

Increase ROI with Microsoft technologies offering faster and smarter data analysis.

Sample Use Cases

- New Data Capture
- Data Migration
- IoT Streaming Data
- Transactional Data Processing
- Data Science Operationalization
- Data Virtualization
- Data Lake Implementation
- Hybrid and Multi-Cloud Strategy
- Metadata Management
- ETL/ELT Optimization
- Pipeline Automation

The Blueprint Way

Data is one of the most valuable resources at your disposal, but extracting that value can be cumbersome. The right infrastructure can reduce resource strain on capture, storage, and utilization across the business. Blueprint matures and strengthens your data infrastructure so you can access the data you need to act faster, easier, and with the flexibility required to capitalize on today’s opportunities.

Modern Data Estate is one of Blueprint’s many Digital Transformation solutions for Azure customers. Ask us about the other solutions we offer.
