Data Assessment in 15 days
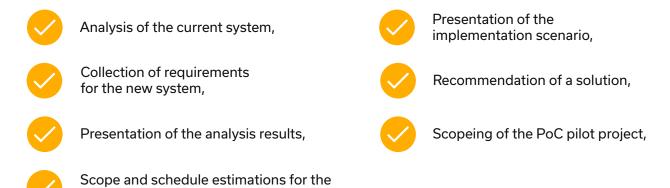

Data Assessment in 15 days

For the Data Assessment, our professionals prepare a plan for transforming and migrating the current analytical and reporting system to a modern Lakehouse architecture built on Microsoft Azure Cloud.

The analysis gives organizations a complete view of their environment and recommendations for cloud solutions. This includes assessing their architecture.

We recommend the Data Assessment to the clients whose current analytical solution is not operating optimally. We advise companies interested in migrating to the Azure cloud and building a modern solution based on the Lakehouse architecture, adapted to BigData support, including streaming data. The Data Assessment is aimed at planning the migration process of the Business Intelligence analytical and reporting system owned by the organization and development into the most modern Data Intelligence solutions.

As a part of the Assessment, our qualified professionals implement the following deliverables:

- Analysis of the current system,
- Collection of requirements for the new system,
- Presentation of the analysis results,
- Scope and schedule estimations for the implementation of the comprehensive project.

- Presentation of the implementation scenario,
- Recommendation of a solution,
- Scopeing of the PoC pilot project,

Our experts will prepare recommendations for the next data migration steps to Azure based on the collected data.

Recommendations based on project experience respecting the latest data security standards will follow, as well as construction of the analytical platforms per the Microsoft methodology. As a result, the client receives a report containing recommendations for data migration and building a Lakehouse analytical platform on the Microsoft Azure Cloud.
