

**Move your current  
platform to Azure  
DevOps**

# Migrate your CI/CD to the cloud with BlueSoft

DevOps is becoming a standard for companies that want to stay relevant in a time of fast changing market demands and gain a competitive edge in today's business world.

BlueSoft as a Microsoft Gold Partner will help you choose the best approach aligned with your organization's growth requirements.

## What is Azure DevOps and what is the migration process?

- 1** At the beginning of our journey, our experts will analyze your existing development platform, CI/CD processes, business needs, and current infrastructure to provide a complete offer for the remaining stages of this migration.
- 2** Then our experts will configure your Azure DevOps environment according to your needs and expectations identified in the first stage. In this stage, all source code, build definitions, and selected artifacts will be migrated to the Azure DevOps Platform.
- 3** After the successful migration, we'll check the implementation with you and ensure your expectations are met.

# Benefits of migrating to Azure DevOps

---

## Simplified Azure Deployment

Deploy your application right to Azure from Azure DevOps

Global availability - Azure DevOps has features that you want for scalable, reliable, and globally available hosted service.

Access to the newest features
