

# Lens by Bouvet

Lens by Bouvet is a communication platform made for HoloLens. Using Lens, customers can reduce travel time and engage in remote inspections. We support HoloLens, iOS, Android and desktop on the web.

The HoloLens technician can show peers, stakeholders and colleagues exactly what she sees, no matter where she is. Share video, desktop and annotations across localities and borders.

Since launch, Lens by Bouvet has seen a steady growth of downloads and increased amount of usage across the globe. Our users praise the solutions for its simplicity and ease of use.

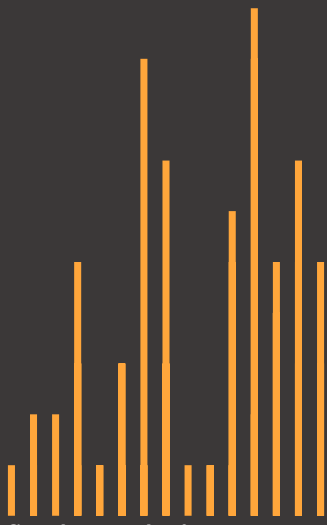

While the feature set of Lens is simple, it is a great steppingstone for new Mixed Reality customers. A HoloLens bundled with Lens, coupled with our strategic advice, will increase the impact of Mixed Reality for new and exciting customers.

“

After trying most of the immersive Remote Expert applications in the market, Bouvet Lens takes the lead in simplicity, configurability, and video performance. A must for enterprise users.
