

Industrial Vision Solution. |

As experts in the Manufacturing Industry, we have designed a complete smart industry solution that offers automated inspection and analysis based on images, for applications such as automatic inspection, process control, robot guidance, etc.

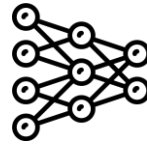

We help you to implement a complete Smart industry solution .|

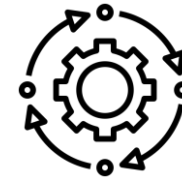

Hardware Optimization

We provide you with the cameras, embedded hardware and any device necessary to implement this solution. We are official partners of Intel.

Smart Industry with Machine Learning

We design and apply customized Machine Learning algorithms through the use of Computer Vision, in the cloud and in the devices themselves.

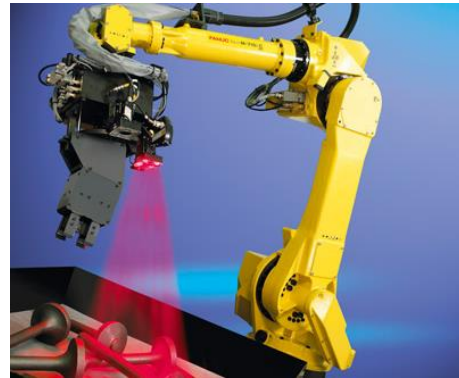

Full implementation and integration

We ensure the full Implementation the solutions and the integration with any existing systems on your company.

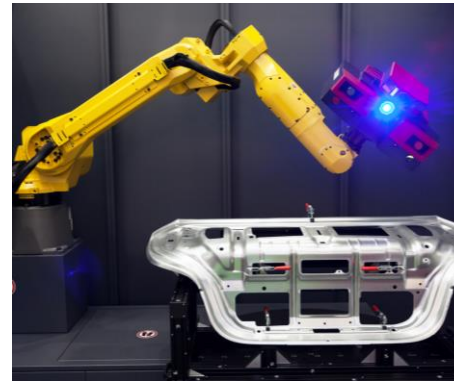

Industrial Vision Solution Aplicability. |

Predictive maintenance

Material Detection

Inspection

Classification

Logistics

Airport Security

Food or Agriculture

Enhanced Security

Why implement Industrial Vision Solution .|

- Increase the productivity of employees so they can focus on other tasks. This solution makes it possible to automate many processes that previously required human supervision.
- Optimal costs from improving the quality of products and enabling employees to focus on other tasks.
- Improved quality thanks to the algorithms that allow us to check that work on the assembly line is correct and to detect problems before they occur.
- Guaranteed security by detecting any type of foreign object to prevent accidents from happen.
- Faster, automated learning, the algorithms employed will improve automatically the more they are used, because they can be retrained with more real cases afterwards.
