Cattle Counting

Sheep Counting

## Capture Cattle Imagery

Image-level Annotation

Use Vision AI-equipped cameras to capture real-time images or video of the cattle in the field.

## Analyze and Count

The Vision AI system processes the imagery to accurately count the cattle and detect any anomalies.

## Generate Real-Time Report

The system compiles the data into a detailed report, including total count, and anomalies, which are updated in real time.

## Notify Stakeholders

Automatically send the report via email, SMS, or a dashboard to relevant stakeholders for immediate review and action.
