Video Annotation

Capture Cattle Imagery

Image-level Annotation
Use Vision AI-equipped cameras to capture real-time images or video of the cattle in the field.
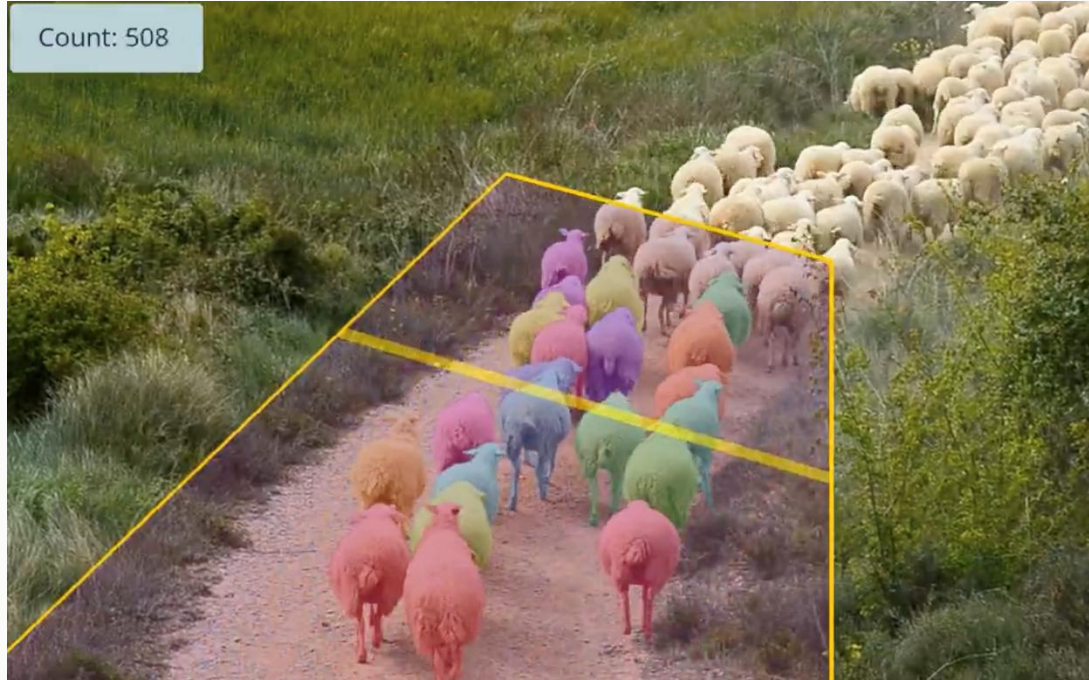

Analyze and Count

The Vision AI system processes the imagery to accurately count the cattle and detect any anomalies.

Generate Real-Time Report

The system compiles the data into a detailed report, including total count, and anomalies, which are updated in real time.

Notify Stakeholders

Automatically send the report via email, SMS, or a dashboard to relevant stakeholders for immediate review and action.
