Azure Cost Assessment

3-pronged approach

Right Sizing

Right Product

Reserved Instances

Right Sizing

- We review the performance requirements for each Azure workload.

- Analyse the previous usage figures.

- Recommend a compute figure to meet your requirements.

Right Product

- We analyse what product range you currently take advantage of.

- Using this and your requirements we identify if there would be benefits of moving to a different Azure product or range of products to better meet your needs.

Reserved Instances

- We review past usage of your Azure services to identify consistent usage that could be reserved.

- If it can be predicted for 1 or 3 years, we look at the cost saving of reserved instances as a licensing approach. Big savings are available for these workloads.
