Microsoft Copilot

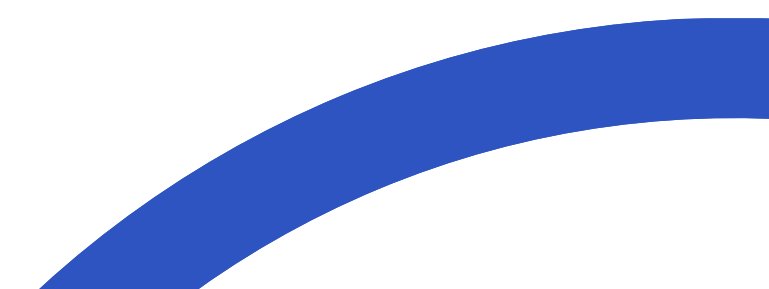

› Bridgeall provide a full range of advisory, implementation and support services for Microsoft Copilot

› **Leading Microsoft Copilot experts**

Our team of experts are leaders in the field. Having worked on pioneering projects for the platform, our team also has extensive Microsoft 365, SharePoint and Copilot Studio experience. We were early adopters of Copilot and can provide expert app-based business solutions.

› **Specialist knowledge**

Our developers have specialist knowledge of the platform. We will use our experience on your development project. Our focus on ensuring your data is safe and also that Copilot is enabled with the right data to help your customers succeed.

Age Scotland Quickstart

- › To support Age Scotland's continued adoption of the Power Platform, Bridgeall provided a review and consultancy to put Age Scotland on a strong footing moving forward.
- › The team were already utilising Power Platform technology and its practical application, however, as a starting point we reviewed the current Age Scotland Power Platform structure, Application Lifecycle Management (ALM) maturity level, practices and processes.
- › Our Quickstart package allowed for the development of the ongoing Age Scotland ALM strategy and our team developed and prepared governance and best practice documentation for this including practical steps for its implementation across a range of project types and scopes.
