

## Datacenter Modernization, Migration and Operations powered by BrillioOne.ai

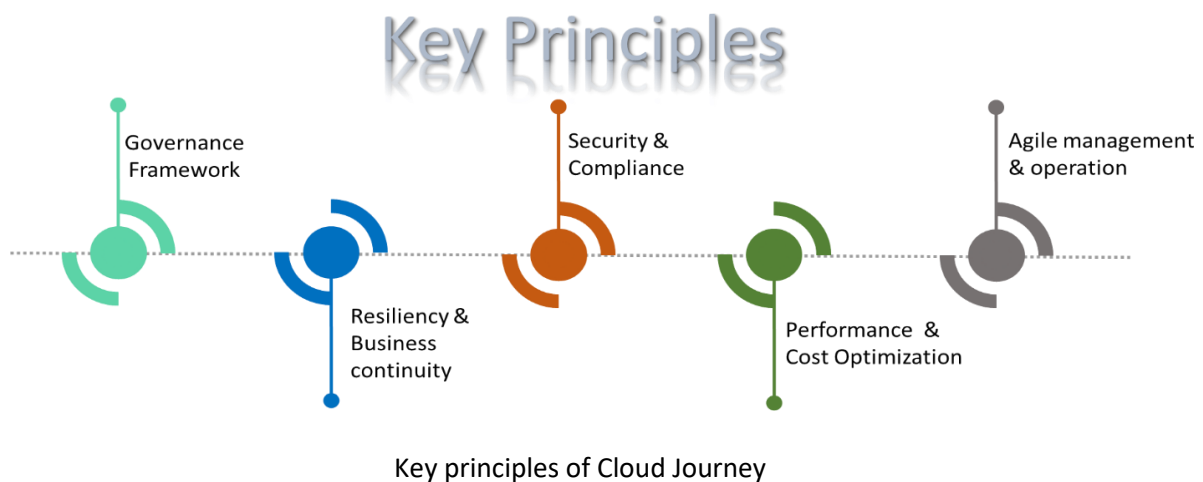

### Overview :

Digital Transformation is essential for the growth of business, enhanced customer engagements, innovation and hence CIOs and other technology executives are actively making digital technology investments by adopting Cloud-first strategy. By adopting this strategy, you plan to migrate their workloads take advantage of New Age Architecture and Platform, to reduce the management overhead, Scalability and Elasticity, Enhanced Business Agility, Improved Security and Compliance, Higher Application/Infrastructure Availability, Optimized Infrastructure Spend etc.

Whatever be the scale of your datacenter footprint, Brillio has global presence, expertise, resources, and tools to migrate your workload to Azure using the principles defined in Microsoft Cloud Adoption Framework (CAF).

Brillio has over 7 years of experience in delivering consulting, migration and managed services for clients running their critical workloads on Azure. Brillio is one of only a few Microsoft Global System Integrator (GSI) partners and recognized by Microsoft as both a Global Cloud Service Provider (CSP) and Global Azure Expert Managed Service Provider (MSP).

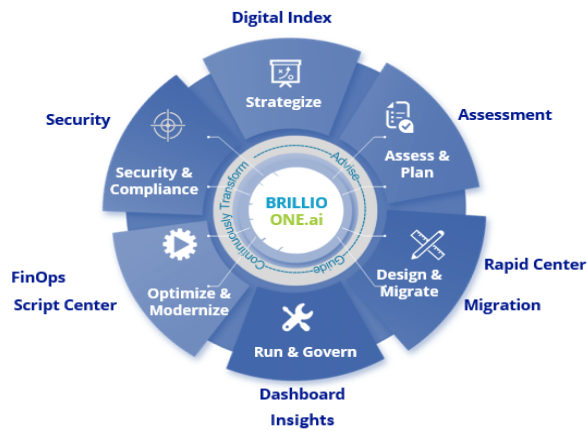

We combine our in depth technical knowledge with the flexibility of Microsoft Azure to deliver a hassle-free and seamless journey to our clients as a one stop shop for applications, integration, platform, data services and automation.

We provide end-to-end service including consulting, design, migration and managed services. With our **Datacenter Modernization, Migration and Operations** service, we help you to:

- Align your core business applications and initiatives around “cloud-first” strategy.
- Enable agility and flexibility to keep pace with dynamic and ever-growing business demands and trends.
- Optimize your cloud platform trends using FinOps and DevSecOps strategies.
- Innovative and modernize approach

We have a proprietary product **brillioOne.ai** purpose-built to accelerate your cloud transformation journey at various stages of cloud maturity in an optimal and secure way. It brings to you a suite of AI driven capabilities, solutions and products to accelerate towards a digital transformation.

- **Digital Index** - Evaluate cloud readiness and digital maturity of organization and regularly monitor improvements
- **Insights** - Seamless integration of broad array of 3rd party monitoring and management tools enabling management through single portal
- **Dashboard** - Drive operational transparency through multiple dashboards to measure delivery Performance and provide integrated real-time insights
- **Assessment** - Assess environment through a mix of native/3rd party tools and online questionnaire to develop migration strategy
- **Migration** - Migrate existing applications and associated databases across different environments using Brillio's migration factory model
- **Script Center** - Prebuilt library of automation scripts that can be readily used or customized to manage day-to-day operations
- **FinOps** - Monitor and track resource usage and manage costs through customizable persona-based dashboards
- **Security** - Measure and rectify cloud security posture and compliance to various global standards through a robust portal
- **Rapid Center** - Prebuilt repository of DevOps-enabled migration utilities and rapid-deployment templates

We provide services under three vast categories.

## Consulting Services

Our strategic IT consulting and advisory panel with top technical minds keeping agile, innovative and scalable mindset serving the customers with below strategic assessments.

- **Application Assessment:** Categorizing Applications to Re-host/Re-platform/Re-factor for Cloud.
- **Infrastructure Assessment:** Discovery of infrastructure assets, operating environment, architecture and service catalogue.
- **Cloud Readiness Assessment:** Assessment of digital maturity, evaluation of workloads for minimal impact to business operations during the transition
- **TCO Analysis:** Identify current and migration cost, determine break-even costs and time frames and calculate the savings following the transition.
- **Security & Risk Assessment:** Infrastructure security, governance and regulatory compliance and SIEM.

We evaluate your cloud readiness, assess the digital maturity and regularly monitor improvements using our **Digital Index** module of **brillioOne.ai**.

## Migration Services

Move your apps, data, and infrastructure to Azure confidently with Brillio's migration services. Our cloud experts will guide you on your cloud migration and modernization process, accelerating your cloud journey.

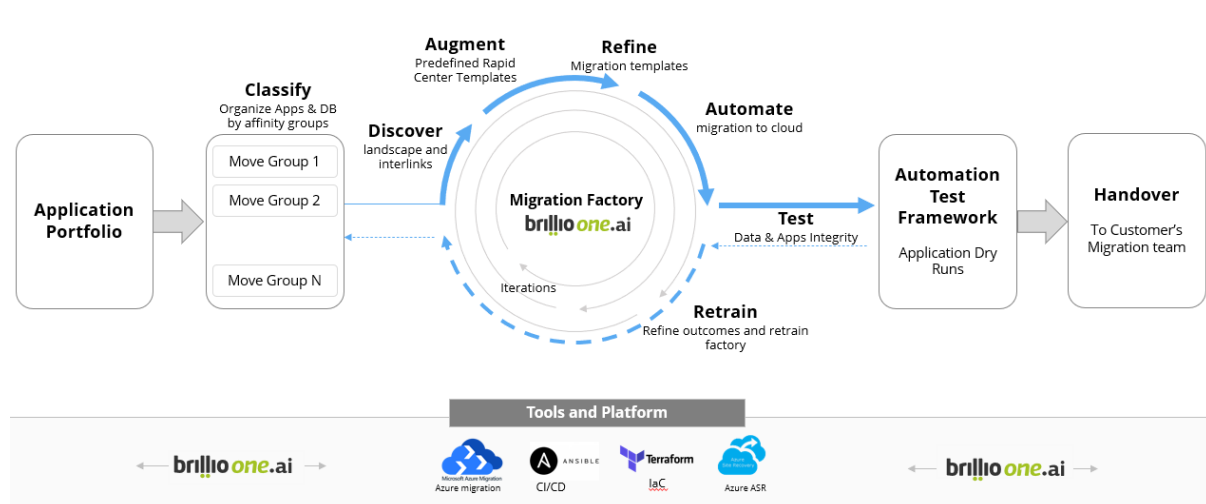

Migrating datacenter to Microsoft Azure Cloud can be challenging and you don't have to make the migration journey alone. Brillio with its proven and industry standard experience in handling multiple cloud journeys across different industries around the globe can help with your cloud

strategy and migration. We take an all-inclusive approach to make sure that your cloud journey is successful.

Brillio's Azure cloud migration expertise let you accelerate your cloud adoption journey in a seamless, secure, low-risk, and cost-optimized manner with following additional benefits.

- Faster Deployment using our Rapid Center scripts/templates
- Pre-built/Customizable blueprints / templates
- Reduce Migration Risk
- Certified Azure Experts
- Collaboration with hyperscalars
- Matured FinOps and SecOps

We have a rich library of automation scripts, prebuilt repository of DevOps-enabled migration utilities and rapid-deployment templates to accelerate your migration journey, made available through **Script Center**, **Rapid Center** modules of **brillioOne.ai**.

## Managed Services

When migration and modernization process is completed, it is time to formulate and establish processes to govern and manage the resources. Our motto will be to follow five key disciplines in cloud governance such as cost management, security baseline, resource consistency & resiliency, identity baseline and deployments which supports your organization policy and protects from key pain areas in alignment with monitoring and management. Brillio does not stop here, we also strive to provide A continual improvement plan on regular basis with respect to various aspects such as optimization, security, cost reduction, automation, processes, policy & compliance, monitoring, IAM process and inventory management etc., by maintaining standard operating model documents and ITSM process.

With **brillioOne.ai**, we have the following modules to effectively manage operations,

- **Dashboard** - Drive operational transparency through multiple dashboards to measure delivery Performance and provide integrated real-time insights
- **Insights** - Seamless integration of broad array of 3rd party monitoring and management tools enabling management through single portal
- **FinOps** - Monitor and track resource usage and manage costs through customizable persona-based dashboards.
- **Security** - Measure and rectify cloud security posture and compliance to various global standards through a robust portal.

Happy and smiling customer case studies from our engagements:
