# Reference Architechture

BrillioOne.ai FinOps module powered by Centilytics platform has an API driven architecture which either triggers a Compute or access stored object directly to serve our customer's request. This architecture allows us to auto-scale based on customer usage.

Centilytics has a unique multi-regional deployment where customers get served from the region closest to them. This ensures minimum latency and the best customer experience.

It is an intelligent solution which easily maps and connects with major cloud providers like Azure, AWS and Google and gives a detailed visibility when it comes to security, cost, health or automation.

The platform also has various application integrations which can be seen from the below snapshot
