Data Warehouse Migration to Microsoft Azure Platform Introduction and 1-hour briefing

Data Warehouse migration from on-premise solutions to Microsoft Azure Cloud Platform

Data Warehouse migration running on-premise licenses is always a big challenge for the enterprise. The choice of inappropriate strategies and methods of migration may result in prolonged development work and a several-fold increase in the cost of a poorly conducted migration. By using our experience, your company will avoid unnecessary testing of possible solutions. Our architects specialize in providing solutions on the Microsoft Azure platform. We will collect information and prepare the most appropriate approach to migrate the Data Warehouse.

Has your company made the decision to migrate your Data Warehouse to the Microsoft Azure cloud?

Do you want to avoid unnecessary costs related to the risk of improper migration?

Do you have a migration plan but you are not sure if it is optimal?

Do you have a problem with the valuation of migration and estimating the labor intensity of such a project?

Do you need specialist support in an ongoing migration?

Take advantage of data migration services to Microsoft Azure

Our Business Intelligence specialists will plan and carry out a comprehensive Data Warehouse migration project or will support your company at various stages of the migration that has already started. Typically, a Microsoft Azure migration project covers key, permanent areas:

- analysis of the migrated warehouse
- selection of a migration strategy
- selection of tools necessary to carry out the migration
- execution of the target architecture on the Microsoft Azure platform
- providing a dedicated team for development work for the duration of the migration.

The migration project is a non-standard process and depends directly on the complexity of the Data Warehouse structure that we want to transfer to the Microsoft Azure platform. Pricing and completion time are determined after the initial design analysis.

You will receive:

- Data Warehouse migrated to Microsoft Azure platform.

Recipients:

- Business / IT decision-makers
- Business analysts
- Management

Note:

During the 1-hour meeting we will discuss next steps to migrate your Data Warehouse and costs involved in it.

For the Data Warehouse migration project to Microsoft Azure, we deliver a dedicated implementation team composed of specialists from various BI areas (business analysts, DWH / ETL developers, BI architects, and testers). The migration ends with a meeting summarizing the work performed.

This service is available in English/Polish.

Solution area:

Analytics / Data Platform / Migration

Industry:

Automotive / Education / Financial Services / Government / Healthcare / Retail
