Microsoft Teams solutions with BT and EE

Microsoft Teams provides complete calling capabilities, allowing VoIP calls between users in your organisation, regardless of your location.

Evaluate the following connectivity models and select the one that works best for you. Microsoft's Teams Phone Mobile in partnership with EE

Operator Connect

Simplified, self-service deployment with no need for separate hardware installation. Intuitive setup and administration via the Teams Admin Centre.

A great option for:

- quick deployment
- organisations with existing service agreements with BT and EE
- management of SBCs and other hardware
- multinationals with locations outside Microsoft Calling Plan markets

Requirements

- Teams Phone license

Teams Phone EE Mobile

A single business-provided EE mobile number can also be your Teams Phone number, enabling seamless calling and voice services across networks and devices.

A great option for:

- quick deployment
- enabling a secure, compliant, and simplified calling solution for mobile and hybrid worker
- saving costs associated with fixed lines, devices, and hardware

Requirements

- Teams Phone license
- Service and phone number

Direct Routing

Highly customisable deployment, allowing you to maintain existing service provider agreements and on-premises hardware.

A great option for:

- organisations with existing PSTN infrastructure (SBC or voice trunks)
- regulatory requirements around telephony
- organisations with a large number of analogue devices

Requirements

- Teams Phone license

Why BT and EE?

Ahead of the game

We're the first to market TPM in the UK.

Highly accredited
