BUSINESS CLOUD INTEGRATION

Where you are in your Catalyst Journey

This proposal assumes you have been through the previous 3 steps of the IDEA framework as part of Microsoft Catalyst, and you have identified your target process to begin your transformation journey.

However, if these steps have not been completed, we can bring your organisation up to speed quickly and help you identify a process to bring into the digital workspace.

Sample Roadmap

The plan below is an outline of a development process set out in phases into the from concept to implementation. This helps to understand where time is needed from both the internal and external teams. Timescales are indicative as number of weeks / months as you may have business critical periods of activity that we will need to plan around or busy holiday periods that affect internal team availability.

Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Ongoing
Discovery	**Strategy**	**Planning & Comms**	**Development**	**Implementation**	**Next Steps**
Governance session with stakeholders to determine services in scope for project Requirements workshop (up to 2 hours) Potential Proof of Concept	Scope definition, Wireframe development and overall target deliverables Design Information Architecture Document delivered to business for review	Form Strategy document high level plan created and reviewed by business Internal circulation for project awareness Internal planning for testing and delivery	Execution of the development plan by Business Cloud Integration Weekly catchups on project status Internal testing and preparation for UAT	Deployment and configuration to target SharePoint environment Review with project stakeholders Recorded training sessions on use	Continual development service assessment to address requirements for automation / features Early life support for SharePoint Web part Support hours if needed & Casper365 support
