Working closely with **Microsoft** is essential when working with the leading edge tools and technologies. Business Cloud Integration has established ourselves as Microsoft PowerApps Partners by having validated live PowerApps in place for our clients as well as qualified PowerApps and Flow teams. See our profile featured on the Microsoft PowerApps Partners page.

We use PowerApps and Flow to benefit our clients everyday.

PowerApps

One of the strongest new parts of the SharePoint and Data access story for business. PowerApps fits into most user stories and is so far greatly underutilised as a tool. Some of the things we have achieved with PowerApps include:

Mobile Phone Apps to add data to SharePoint lists for the mobile workforce

- Projects Risk and Issues while on site
- Sales data – business card scanning to CRM
- Updating list data post meeting for Project Status data
- Task lists and to dos
- Approval processes on the go

Data entry forms within SharePoint Online

- Adding records with intelligent forms to minimise meta data requirements for better user engagement with SharePoint library / list data
- Corporate look and feel, branding, and order of data in a concise SharePoint Form
