

Your M365 tenant, X-rayed in 5 minutes

SafeScan securely connects to your Microsoft 365 environment in read-only mode to identify data exposure risks, security gaps, compliance issues, licensing inefficiencies, and Microsoft 365 Copilot readiness. No data is stored, and no changes are made to your environment.

Talk to our team

One scan across 6 domains

Data Exposure

- SharePoint risk scan
- External links & guest sharing
- OneDrive exposure
- Copilot exposure risk score

Identity & Access

- MFA coverage by user
- Stale admin detection
- Guest account audit
- Conditional Access gaps

Compliance

- DLP policy coverage
- Audit log status
- Sensitivity label usage
- Retention policy check

Microsoft Teams

- External access settings
- Anonymous meeting policy
- App governance review
- Channel & team sprawl

Licensing

- Unused licence detection
- Inactive user analysis
- SKU optimisation flags

Copilot Readiness

- Copilot exposure risk score
- Over-sharing before Copilot
- Governance readiness
- Before/after comparison

How it works

1

Connect

Securely connect via Microsoft Graph with read-only access and review all requested permissions before scanning.

2

Launch

Choose which modules to run including Data Exposure, Identity & Access, Compliance, Teams, Licensing, and Copilot Readiness.

3

Remediate

Your scored report shows all findings with clear explanations, remediation steps, PowerShell scripts, and supports re-scans to track improvements.

Why Business Experts MEA:

- Microsoft Copilot Ready Tier Partner with certified expertise in secure M365 and Copilot Deployments
- Led by Microsoft MVP, ensuring best practice architecture, security and optimization guidance.
- End to end implementation support, from assessment to remediation and roll out with proven enterprise delivery experience in the region.

★ ★ ★ Walk away with

Connect your tenant in under 60 seconds and see every security risk, data exposure, and compliance gap — no installation, nothing stored, completely read-only.
