

BCX X-Pen-Testing: Vulnerability Assessment and Network Penetration Testing

Become a
SPE
(Secure Productive Enterprise)

The BCX Information security assessment and network penetration tests focus on business objectives, risk management strategies and information asset values according to the following principles :

- Confidentiality
- Integrity
- Availability

WHAT WE OFFER

The ever-increasing threat landscape, makes it important for organizations to protect their information assets more effectively against the latest cybersecurity risks.

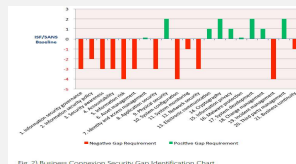

Fig. 23 Business Connexion Security Gap Identification Chart

By performing a Vulnerability assessments and Network Penetration tests, the organization can pro-actively identify weaknesses in IT systems and subsequently make informed decisions to mitigate the risks associated with Information Technology systems and Data Security

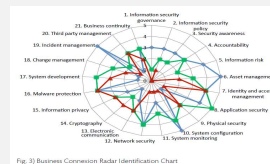

Fig. 33 Business Connexion Radar Identification Chart

The main aim of the Security BASELINE assessment is to ease the process of security status assessment using an intensive, focused approach that creates high impact, risk based solutions within a short timeframe.

Business Connexion is a member of the Information Security Forum (ISF), which is a global organisation creating global security good practice. Through this membership, we have access to a rich library of best practice to advice clients on all aspects of information security.

WHAT OUR CUSTOMERS ARE SAYING

“The penetration testing initiatives and external assurance services provided real confidence to our stakeholders within De Beers.

Through their professional expertise, experience and continual support, we have mitigated numerous cyber landscape risks efficiently and effectively without

Compromising our 24/7 mining operations.”

Morne Karg – Information Security Manager – Debeers Group Namibia.
