## SPE
(Secure Productive Enterprise)

WHAT WE OFFER

The ever-increasing threat landscape, makes it important for organizations to protect their information assets in SQL more effectively against the latest cybersecurity risks. Patching and optimizing protocol usage is the ultimate with best practices for hardening your SQL Servers in this offer.

By performing storage level upwards performance assessment and optimization of your SQL environment, you'll achieve better performance and throughput over you whole application layer.

Curb that spend and sprawl, assess the software assets involved with SQL, consolidate your architecture with our solution to cut costs, while keeping performance.

From Always On Availability Groups and In-Memory OLTP Databases, to failover Clustering Instance (FCI) and In-Memory OLTP Databases and transaction replication we will get you optimized and deployed.

WHAT OUR CUSTOMERS ARE SAYING

"BCX has been providing Sanlam with SQL support service for a while now, and we have never had any concerns on BCX capabilities in assisting or doing maintenance throughout our relationship."

Adrian De la Harpe – Manager: Information Technology & Corporate Facilities – Sanlam Group Namibia.
