

Firehouse Management System

About FMS

Firehouse Management System (FMS) is an all-encompassing software system that monitors and tracks every aspect of the daily operations of an Emergency Station. Developed by firefighters and IT experts with over 30 years of experience, this system is intuitive and makes all information easily recorded and accessible to its users. FMS is also customizable with your logo and choice of skins. With FMS, you can:

- See full staffing profile at a glance, including:
 - Personnel who are currently active, substituting for another, or on leave
 - How long each personnel has been in each station, and where they are assigned
 - Your upcoming events, such as meetings, duty assignments, and more

- View and update information for every personnel on your team, including:
 - Shift history and hours served
 - Crew and committee membership
 - Certifications and qualifications
 - Completed trainings and activities

- Track and update inventory analytics, including:
 - Assignments to personnel
 - Maintenance and repairs
 - Acquisition and retirement dates
 - Item categories and sizes

- Maintain records of all operational activities and their attendees
 - Create new activities
 - Add personnel to the list of attendees
 - Close activities for signup and export attendance lists
