Program summary

United States, United Kingdom, Canada, UAE, APAC | Microsoft Teams only

We are excited to invite you to be a part of our private Early Access Program for our upcoming AI product, Workflow, on Microsoft Teams.

This is a unique opportunity for consultants, consulting firms, and leaders who help organizations undergo AI transformation to get early access to our cutting-edge Generative AI product on a unified platform.

Workflow provides companies with the ability to manage AI transformation across their organization with real-time data on compliance and performance. Workflow can be run natively in-tenant with EntraID or as a SaaS subscription.

Features

→ Unified AI Access

Seamlessly integrate premier AI technologies in one place; GPT-4o for generative text, Leonardo.ai for generative images or videos, and Eleven Labs for generative voice and sound effects.

→ AI Workflow Automation

A powerful blueprint editor lets you build advanced zero-code model-to-model workflows.

→ Compliance

Ensure traceability of all AI assets or content used in company deliveries, documents, or client projects.

→ Quality

Audit and monitor the performance of all AI workflow processes across the organization.

→ Democratize

Workflow delegation enables companies to make cutting-edge AI technologies accessible to all employees while maintaining control over the quality and compliance of AI outputs.

→ Models Security

Fine-tuned models and custom workflows are securely stored in the client's Azure tenant, protecting the company against the loss of expertise or assets during employee turnover.

The private Early Access Program will run throughout the month of June.

Financial support is available for consultants or consulting firms helping clients transform their companies with AI technology. ECIF funding is available through our product partner byEcho.ai for 16 territories worldwide.
