Bytes Sentinel Activation Workshop

BYTES | Smarter together

An accelerated session to get you up and running in Azure Sentinel

Microsoft's Azure Sentinel is a scalable, cloud native Security Information and Event Management (SIEM) platform. Azure Sentinel enables organisations to securely consume data at cloud scale, whilst monitoring threats. Azure Sentinel brings together optimised threat analytics and intelligence to ensure rapid detection and response

Data Collection	Detection of Threats	Investigation of Incidents	Respond and Contain

Bytes believe that customers should utilise Sentinel, primarily in Microsoft Cloud Environments, where several services are enabled. Sentinel enables users to view and assess suspicious activity within the Microsoft Cloud stack from a single location.

To facilitate this belief, Bytes offer a workshop which aims to configure Azure Sentinel for your Microsoft Cloud Environment. The workshop provides a tailored introduction to Sentinel, where you'll gain visibility of its analysis and threat detection capabilities. The workshop is a 2-hour engagement and is free of charge to Bytes Customers. As a workshop outcome, Bytes will configure Sentinel to your Microsoft Cloud Services – instantly activating insight and threat alert capabilities.

Focusing on 4 key points to get you up and running and familiar with Sentinel

Intro to Sentinel → Onboarding to Sentinel → Walk through of Sentinel → Overview of Bytes Capabilities

Intro
Bytes consultants will provide an overview of Sentinel and its capability. What to expect: Data Collection, Detection, investigation and Response.

Onboarding
Bytes consultants will walk you through the setup and configuration of Sentinel to begin collecting logs and data from your enabled Microsoft Cloud Services.

Walk Through
Once your data is ingested, Bytes consultants will walk through the Sentinel portal to show you insights based on your environment.

Next Steps
The final part of the session will be to assess and recommend next steps. Connecting Microsoft Cloud data sources is only the first step in the Sentinel Journey.

What does the onboarding include

Depending on your Microsoft Licensing and Cloud utilisation, Bytes will determine which services can be ingested into Sentinel. Bytes consultants will engage with you prior to the session to ascertain the services in use and which data sources should be ingested as part of this session.

Configure your Azure Sentinel for the future.
