Cloud Migration made easy

# Byx Play overview

## > Technical Analysis

- Analysis covering your existing customizations, modules, extensions and Base Application changes.
- Analysis covering database structure, functional usage and data composition
- Dependencies and integrations
- Deliverable Report includes:
  - ⌘ General Health Assessment of your existing environment
  - ⌘ Data Composition and volume
  - ⌘ Applications, customizations, modules and Base Applications changes
  - ⌘ Strategic recommendations for successful Cloud Migration and future governance

## > Business Goals and Motivation

- Workshop with selected Process- and System owners
- Deliverable: Report containing recommendations on governance and maintenance on the Business Central Cloud platform

## > Deliverable: Price indication for migration using a «Lift-and-Shift» strategy

# «Lift-and-Shift»

## > Advantages

- Simple and fast approach
- Cost effective
- Minimal interference with operations
- Minimal end-user involvement
- Improvements can be done later, on the Cloud Platform
- Flexibility to lay out improvements over time
- Better DevOps Capabilities

## > Disadvantages

- None or minimal effort to redesign
- Certain Business Processes might need adaptations to run in Cloud
- Technical Debt might be brought into the Cloud platform
- Minimized testing might increase risk

# «Lift-and-Redesign»

## > Advantages

- Reviewing everything will give a better end result
- Obsolete code or data can be removed
- A «cleaner» cloud environment

## > Disadvantages

- More similar to a traditional ERP-project
- Significantly increased project complexity
- Cost, time and resource demanding
- Demands broad end-user involvement
- Greater overall project risk

# Hybrid Strategi

- Different migration strategy for different functional areas
- Partial Migrations to Cloud, to mitigate risk
- «Fit-to-Standard» for certain areas
  - Leverage standard functionality in the Base Application instead of older customizations
- «Fit-to-App» for certain functional areas
  - Leverage standardized Apps on the Business Central platform instead of older customizations
- 70% of all our migrations are executed with a Hybrid approach

# Price and Terms – Discover

## > On-Premises

- Analysis conducted on your servers

## > Requirements:

- Local Administrator rights on Database and Application servers

Price: NOK 25 000,-

## > In Byx Digital's analysis environment

- Analysis conducted in remote «Sand Box» environment

## > Requirements:

- Client must be able to export database
- Signed Data Processor Agreement (GDPR Requirement)

Pris: NOK 50 000,-
