Compliance Locker for Microsoft Sentinel Log Data

The role of IT in compliance is evolving rapidly with an ever-increasing quantity of data making adhering to and adopting regulations such as SEC and the upcoming Data Governance Act 2023 more challenging than ever before.

Byzgen recognizes that regulatory technology can play a vital role in keeping pace with compliance requirements in this complex environment. LogLocker is Byzgen's enterprise blockchain platform that is the foundation of our compliance portfolio.

LogLocker is a secure digital ledger that offers improved data audit and integrity by maintaining an immutable distributed record of both data and transactions for compliance.

> *"Providing a defensible proof of how data was collected to support information requests is a major challenge. Currently output formats such as Excel are not legally defensible."*
>
> Compliance Manager

Where transparency and trust are critical, enhanced data sharing capabilities provide 3rd party access to the ledger records offering immutable defensible proof to regulators, partners, and customers.

Microsoft Sentinel's compliance value

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise providing a bird's-eye view of the user activity and application events. The breadth and granularity of the log data collected offers unique access to data that supports complex compliance investigations.

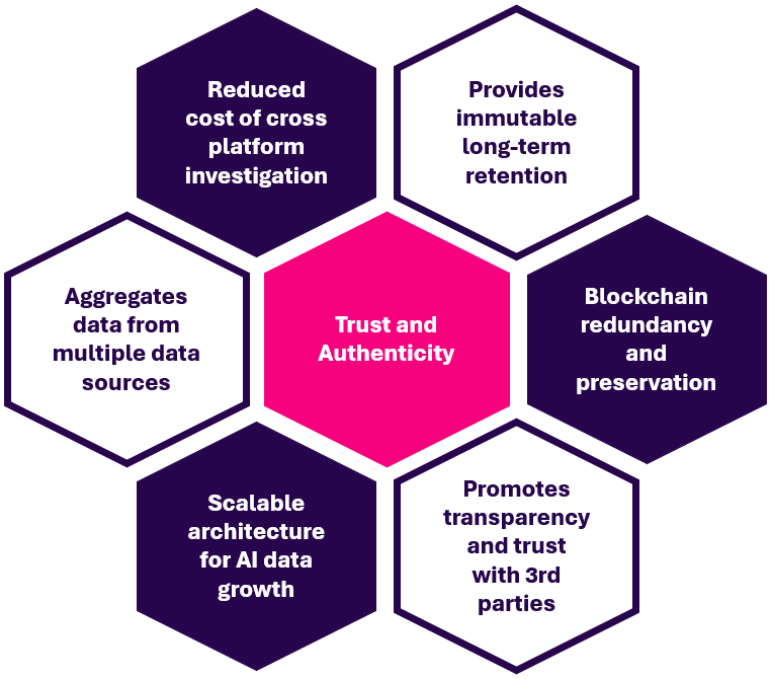
Compliance teams are increasingly challenged by growing data sources and how to track and record events for compliance requirements.

Challenges include capturing data, long term storage and retention, efficient data aggregation, and performant search and retrieval of records.

Being able to respond to litigation or regulatory audits efficiently and accurately is the difference between saving or losing corporate reputation and potential financial losses.

Traditional compliance solutions record data and files often without capturing the user's activity leading up to or around the event. In today's complex legal investigations, it's these user events and actions around the

ByzGen



compliance record that regulators and investigators request to satisfy irrefutable and defensible evidence.

Microsoft Sentinel as a security and intelligence platform encompasses all enterprise event log data for short-term data storage and analytics. It is therefore unsuitable for compliance requirements that include long-term data retention, data preservation, and search and retrieval capabilities for historical investigations in the future.

LogLocker's integration with Microsoft Sentinel enables the value and depth of the enterprise security logs to be captured and retained within Log locker's secure ledger for compliance and litigation purposes.

The LogLocker Compliance Solution

LogLocker is deployed into the customer's Microsoft Azure subscription creating a private secure digital ledger network offering Azure region and redundancy options. Connected to Microsoft Sentinel via API's, the customer configures the data and event log collections that are to be recorded on the LogLocker secure digital ledger. LogLocker includes data management features such as classification and tagging to ensure that data is aggregated and recorded according to the data source or specific compliance regulation. Search capabilities allow for eDiscovery and presentation of specific data to 3rd parties.

	Sentinel	Sentinel + LogLocker
Cloud-native scalable SIEM & SOAR solution	✓	✓
Inherits tamper-proofing and immutability	✓	✓
130+ Microsoft & 3rd Party vendor connectors	✓	✓
AI & ML intelligence for threat detection and response	✓	✓
Supports 90+ days historical compliance and work		✓
Immutable storage and redundancy for long term retention		✓
Defensible logs for legal response and disclosure		✓
Multi-tenant, cross cloud data aggregation		✓
Transparent secure data exchange with 3rd parties		✓

Transparency and record archiving is no longer enough to defend compliance

LogLocker enhances your compliance posture and drives value from Microsoft Sentinel to meet the growing compliance challenges. Enterprises looking to mitigate compliance risk, reputational damage and potential financial losses need to be positioned to defend litigation or compliance challenges with immutable evidence. LogLocker provides irrefutable evidence to protect your business.
