less than 30 steps

Depending of the Discovery Phase

SUCCESS STORIES

WITH OUR 3 PREFERRED MARKET TARGETS

Digital & IT
Market

Automation of HR tasks
SharePoint list
Power BI Dashboard
Enhance Onboarding capabilities
Use of the power of Outlook

C2S BOUYGUES
Digital & IT

300 employees

Automation of HR task through
Power BI & Power Automate

Customer context:

C2S Bouygues wanted to digitalize all the onboarding process by automated HR task's which are fully manual and time-consuming. The arrival of a new employee require multiple tasks like to send E-mails to designated representatives, create meetings to the agendas and inform the support team of the new recruitment. All these actions are time-consuming so they need to be automated in order to improve productivity.

Scope of work:

- Preparatory phase with the HR team to explain why to use a SharePoint automated list with Power Automate and its benefits and especially the ability to work smarter.
- Audit & interviews with all the actors to identify the best practices to use in the project and to design an architecture to meet the customer's requirements
- Identify the best project managers & developers to work each one on a part of the project : SharePoint platform, Power Automate and Power BI Dashboard.

Result:

A SharePoint list which allows the HR team to create & update employee with all the required information's (form to fill out). These data are synchronized to SharePoint and a flow is launched for each new entries or modification finally there were a Power BI dashboard to analyze these data collected.

Methodology applied during 6 weeks with 30 days of workload:

- Adoption & Change Management
- Build / IT Integration

Telecom & Media Markets

Connected smart devices
Robots performing tasks
Recognition technologies offer services
Augmented reality for a better experience
Integrated bots to answer human inquiries

Bouygues Telecom

Telecom & Media

5 300 employees

Build & adoption of Power Apps,
Power BI & Power Automate

Customer context:

Bouygues Telecom wanted to digitalize their existing app which is auditing construction sites for the deployment of fiber and 4-5G. This application is collecting data (even in an offline mode) and allow Project Managers to follow thanks to Power BI a series of dashboards.

Scope of work:

- Preparatory phase with the customer to explain why to use Power Apps and its benefits and especially the ability to work in offline mode
- Audit & interviews with developers to identify the best practices to use in the project and to design an architecture to meet the customer's requirements
- Identify the best developers to work each one on a part of the project : Power Apps Application, Power BI Dashboard and Azure Job for data processing in SharePoint Online

Result:

A power Apps application that can be used by users in offline mode to collect data (form to fill out and some pictures to take with the Power Apps application). These data are synchronized to SharePoint and processed by an Azure Job and finally there were a dashboard Power BI to analyze these data collected.

Methodology applied during 10 weeks with 25 days of workload:

- Adoption & Change Management
- Build / IT Integration

Industry & Manufacturing Markets

Upgrading existing Maintenance Dpt. with AI, IoT and blockchain tech.

Improvement of production monitoring

Automation of inventory management & e-commerce / invoicing

Bouygues Energies & Services

Services

4 800 employees

Deployment & adoption of Power Apps & Power Automate

Customer context:

Bouygues Energies & Services wanted to create a new application allowing the follow up of non used pieces of equipment. To achieved that, we used Power Apps for a mobile front to manage the movement of pieces of equipment in different stocks. Concerning Power Automate, it was used to send all mails notifications and to change the status of pieces of equipment.

Scope of work:

- Audit & interviews with business managers to identify a use case to prototype it
- Study this need in terms of stakeholders (who does what ?)
- Organization of workshops and communication actions to bring out the logical architecture of the application covering all needs

Result:

A Power Apps application prototype for managing unused pieces of equipment. Site managers can declare pieces of equipment that they do not fully use on sites or reserve the pieces they need.
This Power Apps application manages stocks, we know at all times what is coming in and going out with the status of each item. All notifications are sent with Power Automate.

**Methodology applied during 4 weeks with 20 days of workload:**

- Adoption & Change Management
- Build / IT Integration

Microsoft
Power Platform
