

Extended Security Posture Management (XSPM) Platform

C2SEC offers a groundbreaking Extended Security Posture Management (XSPM) SaaS platform. It seamlessly integrates external attack surface management, open source intelligence, cloud security posture management, SaaS (M365) security posture management and supply chain security management into one unified platform. It delivers unprecedented visibility, context, security control, cost optimization, and compliance support across your entire security landscape.

Recognized by Gartner in 2021, 2022 and 2023 as One of Leading Providers for Attack Surface Management

360° Unified Posture Management. Our platform provides unparalleled visibility and context across the entirety of an organization's security landscape. From external attack surface management to Cloud/SaaS posture and supply chain security management, we ensure that no stone is left unturned.

Unprecedented Operation Insights. Our platform doesn't merely aggregate - it discovers, and interconnects, with each component cross-checking and supporting the others for comprehensive security analysis and remediation.

Continuous Cost Optimization. Our platform monitors, identifies, and removes unused and underutilized resources to maximize your operation efficiency, especially in the cloud. Besides this, organizations can realize significant cost savings by replacing multiple isolated products with one unified platform.

Automated Compliance Support. Our platform seamlessly integrates compliance into your security posture management, automatically mapping your security controls to applicable regulatory standards. Streamline your compliance processes, reduce manual errors, and ensure continuous conformity.
