Copilot Readiness Assessment

Assess six key domains of readiness toward adopting Generative AI through Copilot.
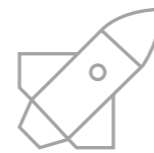

June 2024 | Version 1.0

Eager to adopt Generative AI through Copilot but not sure where to start?

Assess your readiness and generate a tailored roadmap so you can start your journey toward adopting Copilot with governance and security in mind.

Primary challenges

Copilot is an emerging tool that carries big implications. Considering security, governance, data privacy, and usage policies are only some of the key areas to think through before starting to use the tool.

Ideal solution

Each organization has a unique use case and a certain use case for Copilot. It is important to tailor a set of recommendations that reflect the uniqueness of an organization and its context in the marketplace.

Desired outcomes

Generating a tailored roadmap for you to adopt copilot, recognizing your context and unique use cases for the tool, including a set of top-priority initiatives to start your journey off correctly.

Copilot Readiness Assessment

A diagnostic and assessment of your organization's readiness to adopt AI through Copilot, producing a roadmap to guide your Copilot adoption journey.

150+ domains to assess your organization

Assessing across security, governance, content lifecycle, change management, administration, and collaboration.

Visioning workshops

Listening closely to your organization and your users to better understand their vision for Copilot and the focus areas to manage their use cases.

Tailored roadmap

A final presentation that includes the tailored steps you can take to start using Copilot in the right way.

Cadence Solutions' Readiness Assessment and Microsoft Copilot

The power of Copilot cannot be understated, but with the power of this tool in your users' hands, there are new risks to your data protection regime that may not be visible. Our readiness assessment starts you on the right foot, ensuring that you can use Copilot without sacrificing the safety and security of your data.

Data Protection and Security

Ensure that your data remains protected and that your privacy responsibilities are not compromised by Copilot's introduction.

Governance, Policies, and Procedures

Better prepare your organization for adoption by better defining the governance surrounding the usage of Copilot and how it accesses data.

Better data for Copilot's usage

Evaluate if you have certain data that should not be fed into Copilot for fear of accidental disclosure or due to its lack of value to your current operations.

Customer success in the Public Sector

Facing increased pressure to adopt Copilot to 'do more with less', the organization engaged Cadence to create a roadmap for Copilot deployment. The CIO of the organization remarked "I feel more at ease with this project now that we have more visibility and a better idea of what we should do".

▶ Helped make the case for governance

By using the findings in the report, the customer was able to make the case for a project to improve Governance across Microsoft 365 to reduce risks.

▶ Identified data security gaps

Through the assessment, we identified gaps in the data security model in place which were immediately remediated, improving the security posture of the organization.

▶ Framework for usage policy

Together, we drafted an initial framework for their Copilot usage policy, defining when it should and should not be used in the workplace.
