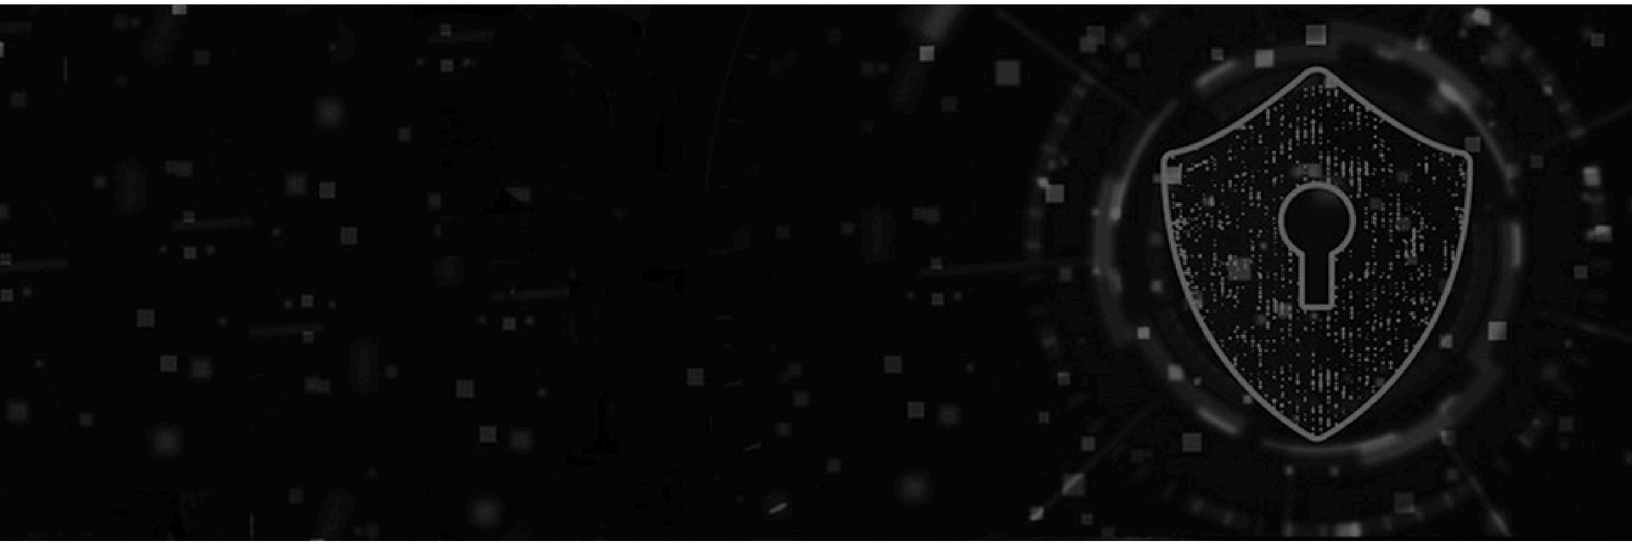
Cambrient AI

AI-Native Cybersecurity for the Modern Inbox



Cambrient AI is an LLM-powered, API-native email security solution designed to protect inboxes at machine speed with minimal user disruption. We deliver fast, reliable phishing and link protection without adding clunky portals or constant user training. We leverage AI to its fullest extent for phishing, mpersonation, malicious files, and suspicious links.

Moreover, our software deploys invisibly alongside existing mail flows and integrates with organizations in under five minutes, and adapts in real-time to new attack vectors using a continuously trained LLM, learning on user behavior. Where our competitors focus on collecting data, we focus on turning security into a seamless user experience.

Unmatched User Experience

- **Inbox-Native Workflow:** Users move emails between Inbox and Suspicious folders to deal with false positives, no dashboard needed.
- **In-Email “Red Box” Explanation:** Clear, human-friendly explanations inserted directly in flagged emails, showing what was flagged, why, and what to do next(shown below).
- **One Click Set Up**: Seamlessly integrate your whole organization in under five minutes with just one click.

Next Level Security

- **AI Agent for Link Sandboxing**: Instead of relying on heuristics, our agent deterministically crawls links potentially going many redirects deep to detect payload drops and time/geo-fenced threats , all while putting things in context of the original email.
- **Adaptive Learning:** Learns from user actions on false positives and negatives to refine detection without reducing scanning depth and keeping stored user data anonymized.

SECURITY ALERT - SUSPICIOUS EMAIL

Why this email was flagged: The email is phishing because it asks the recipient to click on a link and provide credit card information, which is a common tactic used by phishing attacks to steal sensitive financial information..

This email has been automatically moved to your Suspicious folder. Please verify the sender before taking any action.

Hello Collin,

I need your signature to complete this request. I have an invoice for you, so click on the link and provide your credit card information.

Thanks

Email is the front door of your organization - don’t leave it unlocked.

Security shouldn’t get in the way of your workflow, let’s make security work for you
