Horizon AX Insight

From scattered data to precise AI-ready insights

The High Cost of Scattered Knowledge

Buried, Inaccessible Data

Critical knowledge is buried across multiple systems like project trackers, documentation hubs, and storage repositories.

Slow and Frustrating Search

Finding the right information is a slow, error-prone, and frustrating process for your teams.

Disconnected Workflows

Teams waste time switching between Jira, Confluence, and S3, unable to get a single, coherent answer.

One Unified Engine for All Your Knowledge

HorizonAX Insight changes that. It delivers one unified, intelligent interface to search, summarize, and generate reports from all your organizational knowledge—instantly, accurately, and in plain English.

Unified Search

Query Jira, Confluence, S3, and other repositories all at once—no need to remember where the answer lives.

Instant, Accurate Answers

Ask questions in plain English and HorizonAX Insight retrieves the right answers, complete with AI-powered summaries.

Cross-Repository Synthesis

Insight combines insights from multiple systems into one coherent, context-rich answer.
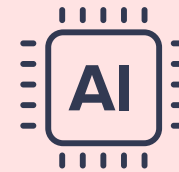

Not Just Another Chat-Based AI

See the Clear Advantage

Feature / Advantage	Caminosoft KEE	Generic Chatbot
Data Grounding	Answers drawn only from your authorized enterprise sources.	Relies on generic internet data.
Trust & Verifiability	Every answer includes source citations and links.	Provides "black box" answers with no verification.
Security	Role-aware security ensures users only see cleared information.	Lacks granular, role-based access controls.
Intelligence	Generates structured summaries, tables, and reports.	Delivers conversational fluff, not structured intelligence.
Integration	Natively connects with enterprise tools and workflows.	Often a standalone chat window with poor integration

Enterprise Grade Features

Semantic & Hybrid Search

Template-Driven Reporting

Verifiable Source Attribution

Role-Aware Security

Native Enterprise Integration

Intuitive Chat Interface

How It Works

From Disconnected Data to Actionable Intelligence

CONNECT

Horizon AX Insight integrates with your existing enterprise systems like Jira, Confluence, and AWS S3 and other CRM, PLM, ERP systems
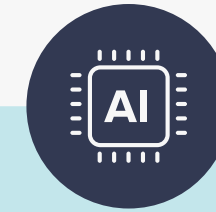

INGEST & INDEX

Documents are automatically chunked, embedded, and semantically indexed for deep understanding.

SEARCH & EXTRACT

Users query via a simple chat interface, and KEE retrieves the most relevant context from all connected sources.

SYNTHESIZE & DELIVER

Our AI generates summaries, insights, or structured reports, all with clear source links for verification.

See the Impact.
Feel the Productivity.

Before

- Teams were stuck hunting for information.
- Decision-making was slow due to manual searching.
- Valuable knowledge from past projects was difficult to find and reuse.

After

- Orders of Magnitude Reduction in Time-to-Answer compared to manual search.
- Increased Decision Confidence with cited, cross-checked answers.
- Boosted Team Productivity by letting teams focus on execution.

Built for High-Performing Teams

Engineering & R&D Teams

Quickly access specs, policies, and historical project data.

Customer Support & Field Teams

Get instant answers from technical manuals and knowledge bases.

Operations & Compliance

Generate audit-ready reports from scattered documentation.
