

Windows in the Cloud. The user and business friendly desktop & app visualization in the cloud.

Situation

Secure access to internal resources for remote users is required.

Significant price increases for virtualization software are on the horizon.

Desire to **replace on-premises hardware** grows.

Challenge

Uncertainty exists with regard to regulatory requirements for the use of public cloud services.

Resources are tied up due to necessary hardware investments & high operating costs.

The potential of the on-premises portfolio for innovations and improvements is limited.

Solution

Modern cloud technologies enable **flexible and secure virtual desktop** use.

Automation and Desktop-as-a-Service can **reduce investment** and **operating costs**.

User experience is **improved** through higher performance and new technologies.

Windows in the Cloud Assessment.

We determine the right solution for your application.

Target group

- Identification of relevant personas and use cases
- Derivation of requirements for the use of a virtual desktop

Feasibility

- Determination of the technical maturity level
- Selection of the appropriate technology for the identified use cases (Windows 365 / Azure Virtual Desktop)
- Implementing a cost-benefit analysis

Roadmap

- Preparation of a results report with rollout plan
- Presentation of the results to decision-makers

Pricing

The assessment is available for a fixed price of 10,000 EUR ensuring a structured evaluation with clear recommendations and actionable insights.

Participants

- IT decision makers, Citrix/endpoint administrators and cloud operations team
- CS Cloud & Endpoint experts

Result

Procedure proposal with business case for the introduction of Windows 365 / Azure Virtual Desktop
