

APPLICATION MODERNISATION ACCELERATOR

Augment your cloud skillset and reduce risk as you migrate and modernise line-of-business workloads to unlock greater business value.

Will your existing applications take you where your modern business needs to go? It's time to consider application modernisation when

- The application is running on old or unsupported technology, making them difficult to maintain, performs poorly, unstable and vulnerable to security attacks.
- The application can't integrate with modern systems, requiring specialised skills to maintain, thus increased costs.
- There's a driving business need to extend the life of the legacy application.
- The application no longer exceeds the expectations of users.

However, planning an application modernisation project can be daunting. You're maybe unsure on the impacts of moving established apps into a new cloud environment.

Modernise legacy apps or adopt cloud native approaches

KICK-START YOUR MODERNISATION PROJECT WITH APPLICATION MODERNISATION ACCELERATOR

CLOSE COLLABORATION

Our team will work closely with your team to perform a deep dive analysis on the business problems need solving, and design a fit for purpose solution.

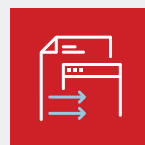

PROVEN METHODOLOGY

Our Methodology aligns with the Microsoft Cloud Adoption Framework to include Architecture, Security, and Governance.

BEST PRACTICE IMPLEMENTATION

Our experienced staff will migrate and modernise your first application to give you a foundational knowledge of modern approaches to confidently develop and deploy web applications in Azure.

DOCUMENTATION AND DELIVERABLES

Your professionally managed project is fully documented and delivered in four coordinated and unified phases.

Aligned with the best practice Cloud Adoption Framework, your newly modernised application will be delivered production-ready, established, and configured Azure landing zone.

We provide a Cloud Application Roadmap for the remaining applications identified so your team can confidently move forward with your next-step strategy.

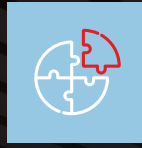

YOUR APP MODERNISATION PROJECT IN FOUR PHASES:

PHASE 1: ASSESSMENT & PLANNING

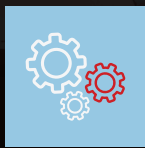

We work closely with your team to assess the legacy application portfolio and identify candidate web applications for modernisation. During this phase, we gather high-level architectural requirements, explore relevant modernisation concepts in Azure, and review current application and platform security and governance. Finally, we assess potential solution architectures for the identified candidate application.

PHASE 2: SOLUTION DESIGN

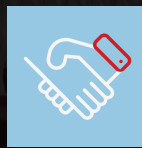

In the design phase, we develop documentation and propose solution architecture based on the data gathered through assessment and planning activities. We provide documentation to outline the architecture, including Azure environments and resources, CI/CD strategy and monitoring.

PHASE 3: IMPLEMENTATION & INTEGRATION

In this phase, we will implement the solution based on the solution architecture design document. We will also assist in implementing any integration requirements for the solution.

PHASE 4: VALIDATION, SIGN-OFF AND HANDOVER

In the final phase, we validate the engagement to ensure the modernisation of your application functions as expected. We provide foundational training and support for your team so that you can confidently launch current and future workloads. We can also provide additional support if required.

ABOUT CBS

Canon Business Services ANZ (CBS) is a technology solutions partner for ambitious organisations. We help clients overcome legacy constraints, close skills gaps, and accelerate modernisation with a practical, outcomes-driven approach that turns complex challenges into clear, achievable solutions.

As a Microsoft Solutions Partner with multiple designations and specialisations, we deliver proven expertise across cloud, security, automation, and managed services. Our teams draw on decades of hands-on experience designing, modernising, and operating end-to-end IT environments.

We also bring deep knowledge of key regulatory and security frameworks—including APRA CPS 234, ASD ISM, ISO 27001, NIST, PCI-DSS and SOC 2—ensuring every solution meets the highest standards of compliance and data protection.
