

INTEGRATED SERVICES FOR MICROSOFT CLOUD

A personalised implementation plan to foster innovation and process efficiency within your organisation.

In today's fast-paced digital landscape, organisations must continuously innovate to stay competitive, and the **Integrated Services for Microsoft Cloud** gives you that with key benefits:

Unified Insights

A unified data platform enables real-time analytics and insights, empowering decision-makers with the information they need to drive strategic initiatives and improve operational efficiency. Microsoft Cloud capabilities, such as Microsoft Fabric and Power BI, allow organisations to integrate data from various sources, creating a single source of truth.

Seamless Integration

Seamless integration reduces manual processes, minimises errors, and enhances productivity, allowing teams to focus on innovation and value-added activities. Azure Logic Apps and Power Automate also offer a vast array of out-of-the-box connectors to easily integrate within the Microsoft ecosystem and for other major solutions/services such as SAP, Salesforce, Oracle and more.

Scalability and Flexibility

Whether it's scaling up resources during peak demand or scaling down during quieter periods, Microsoft Cloud provides the flexibility required to support innovation without compromising performance or security. Microsoft Cloud's scalable infrastructure, powered by Azure, allows organisations to quickly adapt to changing business needs.

Security and Compliance

Microsoft Cloud services are built with security and compliance at their core. With advanced security features and compliance certifications, organisations can trust that their data is protected. This assurance enables organisations to innovate with confidence, knowing that their sensitive information is secure.

Driving Innovation

By leveraging Microsoft Cloud's integrated services, organisations can break down data silos, streamline operations, leverage AI and foster a culture of innovation. The ability to access unified insights, automate processes, and collaborate effectively empowers organisations to develop and implement innovative solutions that drive business growth and success.

Timeline

4 to 6 weeks

Cost

\$40,000 ex GST

THE CANON BUSINESS SERVICES' APPROACH

We will work closely with you and your team to ensure that your integration solution is secure by design, fit for purpose and meets your business objectives.

The CBS methodology aligns with the Microsoft Cloud Adoption Framework to include Architecture, Security and Governance. The professionally managed project will be fully documented and delivered in four coordinated and unified phases:

Assess & Planning

- » Assess the business problems need solving, dive deep, and identify candidate for the solution.
- » Gathering of high-level architectural requirements and exploration of relevant modernisation concepts & patterns in Microsoft Cloud technologies.

Implementation & Integration

- » Develop the proposed solution based on the solution architecture design document.
- » Integrate with internal/third party solution as required.

Development of Solution Architecture

- » Develop documentation and proposed solution architecture based on the outputs of the assessment and planning activities.
- » Documentation to outline the architecture, including proposed Microsoft Cloud environments and resources, CI/CD strategy and monitoring.

Validation, sign-off and handover

Participate and support in User Acceptance Testing (UAT) and conduct training and handover sessions as need. Your integration solution will be deployed in production and non-production environments, with governance and continuous delivery process in place.

ABOUT CBS

Canon Business Services ANZ (CBS) is a technology solutions partner for ambitious organisations. We help clients overcome legacy constraints, close skills gaps, and accelerate modernisation with a practical, outcomes-driven approach that turns complex challenges into clear, achievable solutions.

As a Microsoft Solutions Partner with multiple designations and specialisations, we deliver proven expertise across cloud, security, automation, and managed services. Our teams draw on decades of hands-on experience designing, modernising, and operating end-to-end IT environments.

We also bring deep knowledge of key regulatory and security frameworks—including APRA CPS 234, ASD ISM, ISO 27001, NIST, PCI-DSS and SOC 2—ensuring every solution meets the highest standards of compliance and data protection.
