Spyglass:
Microsoft 365 Security Assessment

THE CHALLENGE

Clients are looking for ways to evaluate their current security posture. Migrating to Microsoft 365 is a great step toward modern workforce enablement, but IT can become overwhelmed by the many options and settings. Clients often...

- Configure M365 to "work" but then fail to make continuous improvements
- Are unaware that their sensitive data is not being stored securely
- Are already compromised
- Leak sensitive information due to poor business processes
- Believe they have solved issues when, in fact, problems in their environment still exist

That's where Spyglass comes in. A security expert inspects your tools, enables security features you may not realize you already own, and identifies those you should be using—providing you with a new, meaningful view of your security landscape.

Through security coaching, Spyglass creates intelligent views of activity in your environment, up to the last 90 days, with easy-to-understand insights into potential issues.

WHAT YOU GET

The Spyglass Microsoft 365 Security Assessment provides you with guidance on the Microsoft features and tools that help improve your security posture. The assessment itself takes just a few short days and requires only a 4-hour commitment on your part.

1. **Discovery Phase:** Enablement of select M365 tools

2. **In-Person Briefing:** A comprehensive review of your current security status, including any risky activities detected

3. **M365 Security Roadmap:** Recommendations along with a timeline to help you prioritize actions to be taken

4. **Security Assessment Findings Document:** A full report that outlines the findings and relevance in easy to understand language and recommendations

TYPICAL FINDINGS

- Compromised accounts
- License opportunities
- Previously unknown attacks
- Impersonated employees
- Data exfiltration
- Configuration gaps that put the client at risk
- Sensitive data being mishandled or shared insecurely
- Secure score of below 50 points (out of 800)

✅ Enablement of key M365 and EM+S tools in discovery mode

✅ Security Assessment Findings Document

✅ In-Person Security Findings Briefing

✅ Recommended M365 Security Roadmap
