

Microsoft 365 Specialists

SECURE RETAIL SERVICES

Improving stability,
security and visibility
across devices

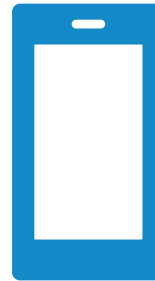

Retail Kiosk Program

Working with Microsoft and some of the top 10 retail customers in the world to deploy kiosk mode in all locations

Millions of users and devices managed following our program.

Solved an ongoing limitation of task workers accessing their personal data on shared and zebra devices in retail locations

Flexibility to support any user experience and increase retention.

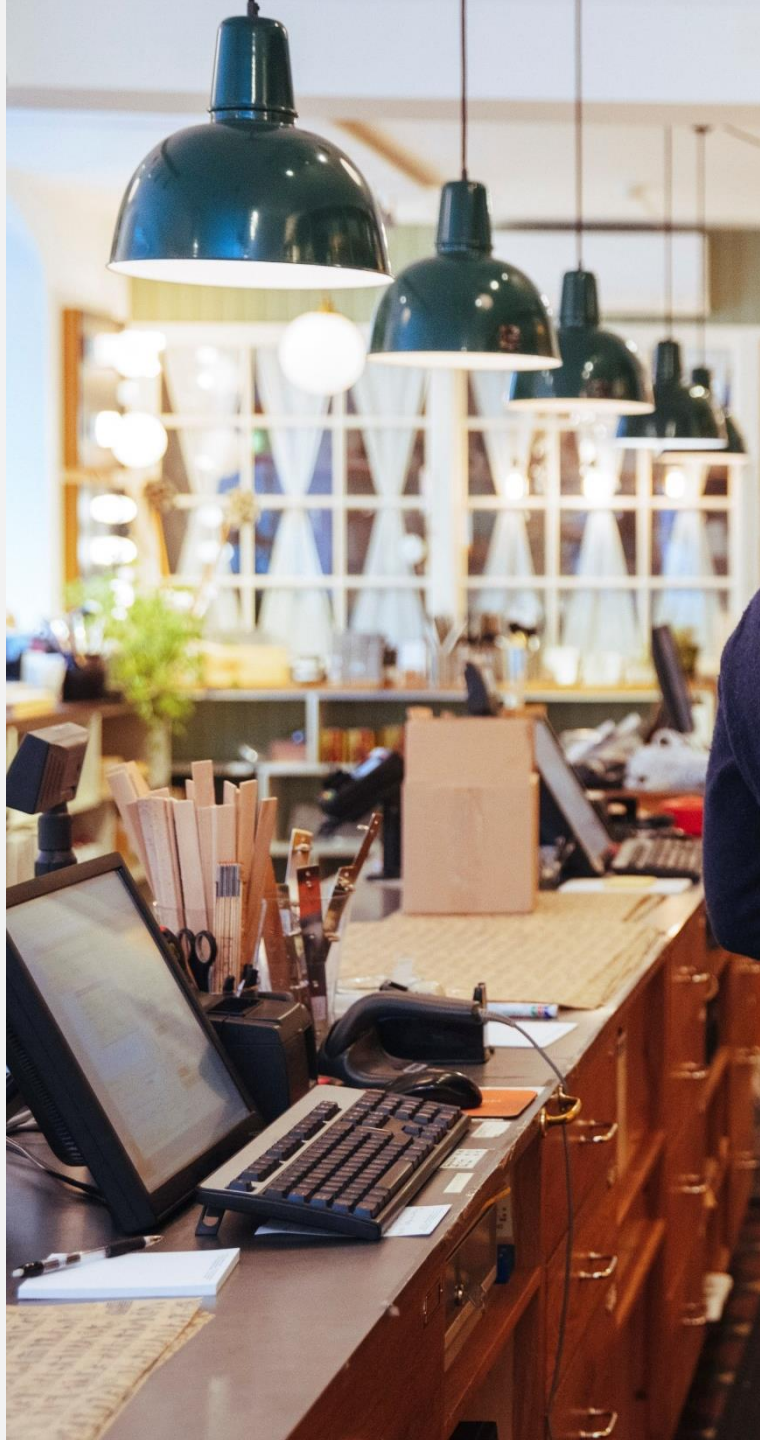

By utilizing single-sign on capabilities, the task worker can logon to any shared device, open Teams or a browser and access their content.

Build security in from the ground up.

INTUNE ANDROID & ZEBRA

- **Eliminate 3rd party tool costs**
- Migrate policies to Intune
- OEM Config using JSON
- Home Screen Management
- Selective App Deployment

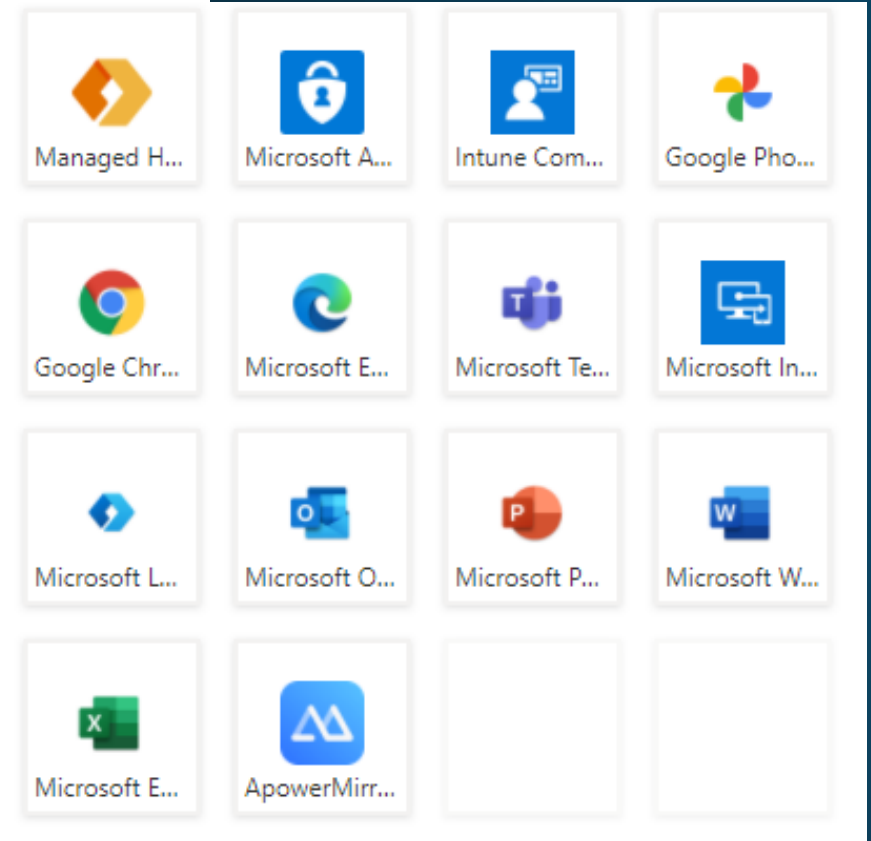

Kiosk Mode

- Device **Azure AD**
Joined Shared
Devices
- **Multi-User** devices
- Publish MSOL apps
- App Configuration

Kiosk Mode

- Kiosk mode is a way for a company to fully manage corporate owned devices
- When a device is set with kiosk mode, only the apps you add are available
- Intune uses configuration profiles to create and customize these settings for your organization's needs
- After you add these features in a profile, push or deploy these settings to groups in your organization

Kiosk Mode

- A sign in screen is presented to the task worker for login
- Once the user selects sign-in, the user will be prompted to enter their username and password to authenticate against Azure
- After login, the apps assigned to the device will display to the end-user
- Settings for timeouts, log off, and screensaver can be applied to the device
- Worker signs out and the next task worker can utilize the same device without mixing data
