

End-User Compute Consulting

Virtual Apps and Desktops Health Assessment

Address virtual apps & desktop infrastructure pain-points and by providing actionable remediation guidance

CDI's vApp & vDesktop Health Assessment allows your organization to quickly assess your Virtual Apps and Desktops infrastructure within a standard 1-week engagement*. The assessment involves manual and automated tools and assesses the following high-level health details regarding your organization's vApp & vDesktop infrastructure:

Administration

Performance

Scalability

Stability

Security

CDI's Virtual Apps & Desktops Health Assessment provides long-term roadmap and actionable remediation guidance to improve and optimize your organization's end-user compute virtual infrastructure.

*1-week engagements are standard, depending on the size & scale of the infrastructure

Deliverables

- Review of your organization's vApp & vDesktop infrastructure (Citrix, VMware or Microsoft)
- Documentation of existing vApp & vDesktop pain points within environment
- Perform performance metric collection with Liquidware Stratusphere FIT
- Health Assessment Documentation - 40+ page document with recommended improvements and estimated LOE
- Review of standard features/functionality currently not in use
- Review security best-practices
