

# Microsoft Purview Compliance & Data Governance Enablement

## Overview

Microsoft Purview provides a unified platform for data governance, classification, DLP, insider risk and regulatory compliance. Celebal's engagement helps organizations discover, classify and protect sensitive data while enforcing policies across cloud, SaaS and hybrid systems.

## Engagement Highlights

**Compliance requirement mapping** (GDPR, HIPAA, PCI, ISO, SOC, DPDP and internal policies)

**Purview deployment for Information Protection, classification, DLP and insider risk.**

**Onboarding data sources including Azure, M365, Power BI, SaaS apps, on-prem and databases.**

**Policy configuration for retention, auto-labelling, information barriers and access governance.**

**Compliance reporting, dashboards and governance training.**

### What We Assess

- ❖ Current data landscape: where sensitive / regulated data resides (cloud, SaaS, on prem).
- ❖ Types of data handled - PII, financial, operational, confidential, analytics data.
- ❖ Existing methods or tools for data classification and DLP enforcement.
- ❖ Retention policies: durations, enforcement methods and gaps across systems.
- ❖ Current risks or compliance challenges tied to insider activity, eDiscovery or governance.

### Key Features

- ❖ 1. Data discovery & classification using sensitivity labels and automated policies.
- ❖ 2. Enterprise DLP controls across endpoints, cloud, email and SaaS workloads.
- ❖ 3. Insider risk detection with behavioural analytics and policy-driven controls.
- ❖ 4. eDiscovery, retention & governance automation across the data lifecycle.

# AI-Powered Security

## Natural-language compliance queries

("Which users accessed sensitive financial data in the last 30 days?").

## AI-driven recommendations

for improving DLP, retention and governance policies.

## Weekly AI summaries

of compliance posture, sensitive data coverage and policy violations.

## Command-based automated actions

such as tightening policies around high-risk data or users.

## Business Impact

Organisations reduce regulatory risk, minimise data leakage, improve governance maturity, gain centralised visibility into sensitive data, and automate retention and protection across the enterprise.

## Implementation Roadmap

1

**Compliance & Purview Readiness:** Requirement workshops, discovery sessions and risk-based scoping.

2

**Purview Baseline Configuration:** Sensitivity labels, classifiers, DLP policies and governance baselines.

3

**Data Source Onboarding & Scanning:** Targeted scans across priority systems for PII, financial and confidential data.

4

**Controls Enforcement & Integration:** DLP, auto-labelling, retention rules, insider risk controls and integration with SIEM/SOAR.

5

**Validation, Reporting & Handover:** Posture validation, dashboards, training and runbooks.

## Estimated Range

**USD 12,000**  
(Fixed / Estimated).

Final pricing depends on data source count, classification scope, DLP depth and eDiscovery/insider risk requirements.

## Why Celebal

- We don't just set up generic labels; we map your Information Protection and DLP policies to complex global and regional mandates like DPDP (India), GDPR, HIPAA, and PCI-DSS.
- We optimize your Purview Data Map to integrate seamlessly with Microsoft Fabric and Power BI, providing a unified view of data lineage from source to dashboard..
- We implement sophisticated Insider Risk Management that uses machine learning to detect high-risk behaviors and data exfiltration patterns before they become breaches, protecting your intellectual property.
