

COMPLETECARE AUTOMATE

You don't have a staffing problem — you have an automation gap.

A fixed-scope Microsoft Power Platform build that turns repetitive workflows into automations your team actually uses, giving skilled staff their time back.

Hours back

for skilled staff, every week

Power Platform

governed Power Automate and Power Apps

Fixed-scope

a build your team actually adopts

THE REAL PROBLEM

Your most expensive work is the repetitive work nobody automated.

Re-keying data, chasing approvals, moving files between systems — the most expensive hours in most organizations go to work that should run itself. CompleteCare Automate turns those workflows into governed automations, so skilled staff get their time back for work that needs a human.

Organizations where staff capacity is consumed by copy-paste processes, approvals, and hand-offs that should run themselves.

WHAT YOU RECEIVE

Automations your team actually uses.

Candidate discovery

Automation-candidate discovery and prioritization across your operations.

Power Automate flows

A build of your highest-friction processes in Microsoft Power Automate.

Power Apps

Microsoft Power Apps for the forms and tools your team needs.

Governance & handoff

Microsoft Power Platform governance — environment strategy and DLP — plus a runbook.

Why it works

- ✓ Targets the repetitive work that quietly drains capacity
- ✓ Governed Microsoft Power Platform — not shadow automation
- ✓ A build your team adopts, with a runbook to maintain it
- ✓ Expands capacity without adding headcount

INVESTMENT

FIXED-SCOPE PROJECT

Scoped per engagement • optional managed service

Scope your first automations.

Book a short call to find the hours hiding in your workflows.
