

Azure Optimization

Are you making the most of the Azure Public Cloud?

With the ever-evolving maturity of the Microsoft Azure Cloud and its growing portfolio of services it is imperative for businesses not remain static. It is vital businesses ensure they have evolutionary approach constantly reviewing how they use Azure to take best advantage of new services and reduce cost without compromising security or availability

How we help

Centrality provide an independent service delivered by Microsoft Experts to provide you with an assessment of your Azure estate enabling you to make informed decisions and maintain control.

Following a consultative engagement and structured service based approach we review your Azure estate to:

- Validate your design against the well architecture framework
- Identify orphaned resources
- Validate services Compute, Storage & networking configuration
- Identify technical scope optimization through re-sizing, consolidation, re platforming or reserved instance
- Identify a roadmap for future optimization

Common challenges with Azure

Is my Azure estate correctly configured?

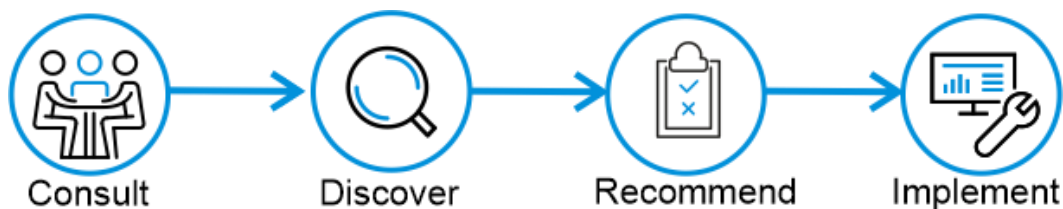

Am I taking advantage of all the latest services?

My consumption costs are higher than I planned

I need to get better visibility and control

I need an independent audit on my deployment

Do I have the appropriate governance in place?

Valuable insight to enable informed decisions

Most organisations that perform a lift and shift or do not regularly review their Azure estate will overspend and not be taking advantage of Azure

What can I expect?

You can expect a rich and engaging dialogue with an Azure Solution Expert. They will need to consult with your team to learn about your specific deployment in Azure, and require read only access to undertake the discovery.

At the end of the review, you will receive a comprehensive written report providing you with:

An overview of your Azure estate

A summary of your estate, its resources and architectural configuration.

Cost reduction recommendations

An estimate of cost savings achievable through optimization of your estate covering optimization, re-platforming, procurement models and service adoption.

Design recommendations

A review of your design against Microsoft Cloud Adoption Framework and well architected principles.

General recommendations

Provision of supplementary recommendations focused on improving your Azure Advisor score.

Our Azure Expert will guide you through the report explaining the observations to you and your team. You can then make an informed decision on how to proceed and implement the recommendations, either by doing this yourself or with the help of Centrality.

Why Centrality

We have been helping customers plan, design, migrate and leverage the power of Microsoft Azure since its launch.

- Trusted Certified Azure Expertise
- Adherence to Microsoft best practice
- Flexible partnership approach
- Proven track record of Azure optimisations

Benefits

Customers typically achieve 30% to 50% cost savings which can be implemented in a matter of weeks.

We recommend customers undertake the process at least once per year to ensure they leverage the latest innovation in Azure.

Helping you maximise your investment in Azure
