

Connect by Centrality

Secure, Managed and Always up to date

To succeed today, you need the right platform

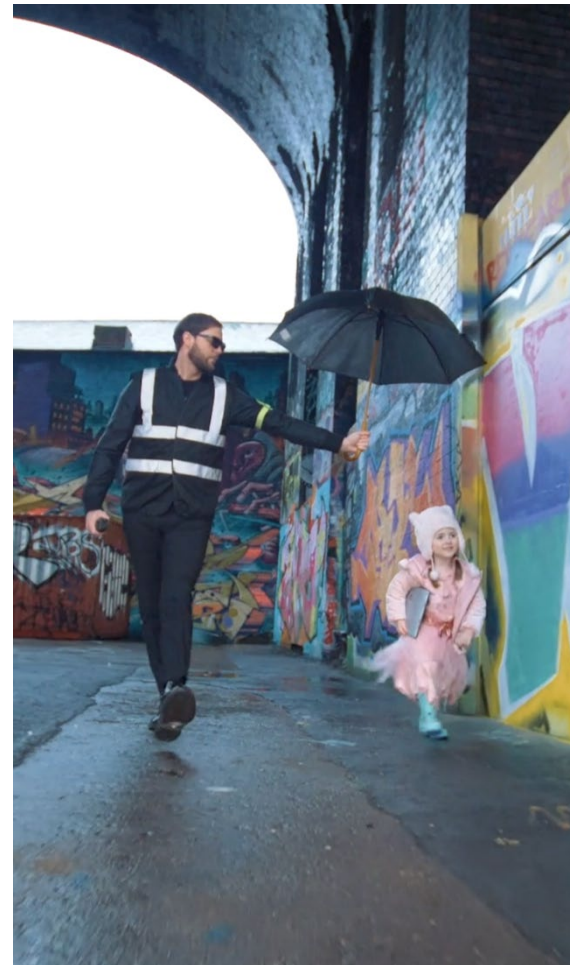

Marketplace and digital trends increasingly shape the way we work and do business. More and more employees are spending time away from their office than ever before. But whether you're on the road or in an office, you need secure and consistent workspaces that simplify collaboration with local and remote colleagues.

Connect by Centrality provides a highly secure Windows 10 cloud-powered working experience on your existing hardware, providing you with accessible and consistent ways of working across your entire organisation.

**Get started in days with no up-front costs
and no infrastructure to deploy.**

Established for over 20 years, Centrality brings a wealth of experience as well as industry best practice in an easy to deploy remote service. No longer do you need a big project to move to the "next version" of Windows, or deal with the twice-yearly Windows 10 Feature Updates.

Speak to us to see just how easy it is to get a pre-hardened, highly productive Modern Workplace solution, out of the box, that is easy to deploy remotely, is fully supported and is always up to date.

A secure, evergreen, fully managed and supported cloud-native Microsoft 365 solution.

Comprehensive Protection

Windows 10 is the safest and most secure Windows ever and with Centrality's deployment of NCSC best practices along with added protection from Microsoft's Enterprise Mobility and Security suite you can ensure the best possible protection without compromising user experience.

Ensure Productivity

Gain productivity without compromise. Employees benefit from using familiar apps and a consistent experience across any device. Best-in-class accessibility services are enabled by default to deliver value to all.

Access anything, from anywhere at any time

Get the familiar Office experience on any device and work with your files anywhere. At home or in the office, access your apps through a secure and seamless user experience no matter what time of day. Robust Internet content filtering provides another layer of protection, wherever you are.

Managed, Updated and Supported 24x7

With monthly Quality Updates and bi-annual Feature Updates for both Windows and Office, as well as daily anti-malware updates it can be time consuming to keep devices up to date. Centrality manages all this on your behalf, 24x7x365 from our UK Service Centre.

How it works

We will work with you to understand your requirements in each of the 4 pillars below. The combined service is then provided for a fixed per user, per month price on a subscription basis. *
