

M365 Copilot Workshop

Our service is designed to ensure a smooth and successful deployment of Copilot, allowing your organisation to take full advantage of the tools and capabilities to improve productivity and streamline workflows.

Our offerings comprise of:

- Copilot Workshop
- Copilot End-user Enablement
- Technical readiness program (Copilot and Modern Data)

We start with the workshop that walks you through the various stage of the technical readiness and End-user Enablement (EE) program (sometimes known as Adoption and Change Management) and the expectations both on you and us.

A separate workshop can be arranged to discuss enablement (EE) in more detail where required.

Post workshop

Post workshop, our project approach would normally follow two main streams:

- Adoption and Change Management (ACM)
- Technical Readiness (TR)
