

Centric's Fabric Proof of Value

Experience the transformative power of Microsoft Fabric in your organization.

Unlock the full potential of your data with Centric's Fabric Proof of Value. This offering is designed to demonstrate the transformative power of Microsoft Fabric in your organization, providing a clear path to enhanced data management, analytics, and business intelligence.

What we offer

Experience the power of Microsoft Fabric with Centric's expert guidance. Our Fabric Proof of Value (POV) is designed to showcase the tangible benefits of a modern data platform, helping you drive innovation and achieve your business objectives while aligning with the Microsoft Azure Innovate Partner-led: Analytics Proof of Value MCI engagement.

Key Benefits:

- **Enhanced Data Management:** Streamline your data management processes with a unified platform.
- **Improved Analytics:** Gain deeper insights with advanced analytics and reporting capabilities.
- **Scalability:** Leverage the scalability of Microsoft Azure to handle growing data volumes.
- **Cost Efficiency:** Reduce costs by optimizing resource usage and eliminating data silos.
- **User Empowerment:** Empower your team with easy-to-use tools and comprehensive training.
- **Improved Decision-Making:** Make data-driven decisions with real-time insights and predictive analytics.

What our customers are saying

"We were impressed with the caliber of the consultants and had confidence in both the team and the project."

– MATTHEW CONLEY, CIO,
ASSURANT HEALTH
TECHNOLOGIES

Our Methodology

Initial Consultation and Planning:

Understand your business goals and data challenges. Identify key performance indicators (KPIs) and success criteria aligned with Azure Innovate requirements and a core analytics use case of your choice.

Environment Setup:

Set up the necessary cloud infrastructure on Microsoft Azure. Ensure all security and compliance requirements are met. Connect data sources to the Fabric environment.

Solution Design and Configuration:

Develop data models tailored to business needs. Configure analytics tools and dashboards. Customize the solution to align with specific requirements and Azure Innovate guidelines.

Implementation and Testing:

Migrate relevant data to the Fabric environment. Implement key features and functionalities. Conduct thorough testing to ensure the solution meets defined success criteria and Azure Innovate standards.

User Training and Enablement:

Conduct training sessions for the team to ensure they are proficient in using the new tools. Provide comprehensive documentation and user guides.

Review and Optimization:

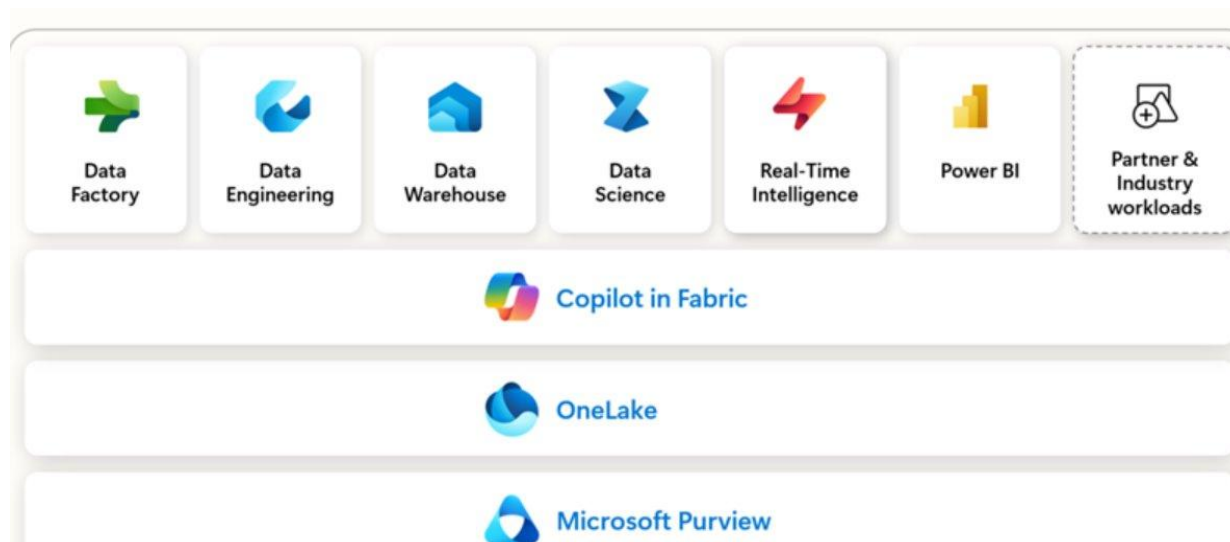

Review the performance of the solution against the success criteria. Optimize the solution based on feedback and performance metrics. Present the results and demonstrate the value delivered, highlighting alignment with Azure Innovate requirements.

Accelerate your data potential with Microsoft Fabric

From data integration and engineering to business intelligence and real time analytics, Microsoft Fabric enables data professionals to host all their analytics workloads in a SaaS-based, lake-first solution—eliminating organizational siloes.
