

Transform Your Business: Centric's Dynamics NAV to Business Central Migration

Unlock 40% Greater Efficiency and Cut IT Costs by 30%

Stop letting outdated technology hold your business back. While your competitors leverage modern, cloud-powered ERP systems, are you still struggling with the limitations of Microsoft Dynamics NAV?

The Hidden Cost of Standing Still

Your current NAV system is silently draining your resources:

- **Manual processes** eating up 15-20 hours of productivity per week
- **Limited remote access** hampering modern workforce flexibility
- **Escalating maintenance costs** with Microsoft ending extended support
- **Data silos** preventing real-time business insights
- **Integration headaches** slowing down digital transformation

Overview

Organizations using Microsoft Dynamics NAV face inefficiencies due to outdated technology and limited scalability. Migrating to **Microsoft Dynamics 365 Business Central** solves these challenges with modern, cloud-based infrastructure, enhancing agility and reducing maintenance costs. This transition optimizes ERP operations and supports sustainable growth. As your trusted Microsoft Dynamics advisor, we can help you seamlessly migrate and maximize the benefits of this solution.

Experience the Business Central Advantage

- **Instant ROI:** Most clients see productivity gains within 30 days
- **30% Cost Reduction:** Eliminate server maintenance and IT overhead
- **Work Anywhere:** Full mobile and remote capabilities
- **Real-Time Intelligence:** Built-in Power BI dashboards and AI insights
- **Future-Proof:** Automatic updates and Microsoft's latest innovations
- **Seamless Integration:** Native Office 365 and Microsoft ecosystem connectivity

Deliverables

The migration process from Microsoft Dynamics NAV to Microsoft Dynamics 365 Business Central involves several structured phases and tasks to ensure a seamless transition and successful implementation. Our implementation of Microsoft Dynamics 365 Business Central includes, but is not limited to the following phases:

Assessment Phase

Evaluate the current Microsoft Dynamics NAV setup, including data structure, customizations, and integrations. Identify key stakeholders, gather migration requirements, and assess data compatibility with Dynamics 365 Business Central.

Planning Phase

Develop a migration plan with timelines, resources, and milestones. Define the migration scope, covering data transfer, customizations, and user training.

Data Preparation

Cleanse and validate data for accuracy. Identify data mapping requirements and create scripts for extracting, transforming, and loading data into Business Central.

Customization and Configuration

Review existing customizations, rebuild them in Business Central, and configure workflows, user permissions, and the chart of accounts.

Integration Setup

Identify and configure third-party integrations using connectors or APIs. Test data flow and synchronization between Business Central and integrated systems.

Testing and Quality Assurance

Conduct thorough testing of migrated data, configurations, and customizations. Perform user acceptance testing (UAT) and resolve any issues.

Go-Live and Post-Implementation Support

Execute the migration plan and onboard users. Provide training materials, ongoing support, system monitoring, and post-migration review for continuous improvements.
