

Cloud Adoption Readiness and Roadmap Assessment

Make informed decisions and stay in control of your journey to the cloud

Digital transformation remains a top priority for CIOs, with over 88% of businesses utilizing public cloud today. Applications and data often are critical to business operations, and their migration requires meticulous planning and considerable time. Not all workloads can be migrated simultaneously, and some may move to the cloud while others continue to run from on-premises data centers. Supporting this transition and managing a hybrid environment, all while ensuring peak business performance, can be a significant challenge for any IT organization.

Migrating to the cloud need not be a risky endeavor. Ensure a seamless transition that mitigates potential pitfalls by working with an experienced partner guiding the process. Centric provides expertise and support to mitigate risks and make sure that your migration strategy is robust, and your business operations remain uninterrupted.

OVERVIEW

Organizations choosing a “cloud first”, or “cloud only” strategy may be facing some challenges:

- Lack of in-house expertise and skills for the transition to the cloud
- Limited resources for maintaining operational excellence
- Concerns about availability, resilience, and security of the future platform
- Uncertainty regarding the business case and TCO
- Unplanned delays and unexpected cost overruns
- Risk of service downtimes and disruptions during migration
- Ensuring data integrity and regulatory compliance

Centric IT Solutions offers this assessment as a cloud consulting service covering the crucial Plan phase in a Cloud Adoption Framework.

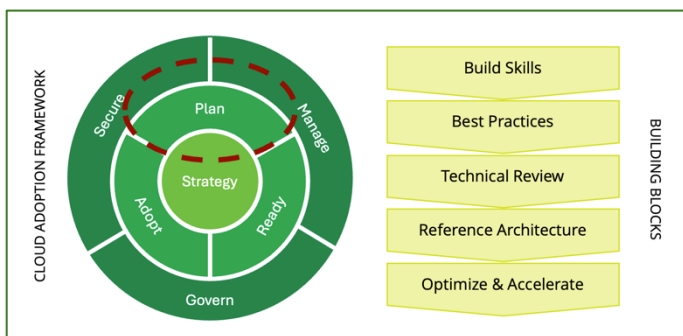

Figure 1: Cloud Adoption Methodology

The service is based on a structured approach, delivered as four collaborative 3-hour workshops within a timeframe of 3 weeks, where a combined team of cloud, DevOps, and security experts will work

with client’s subject matter experts, to make sure that the service delivery aligns with the pre-defined cloud adoption strategy.

OUTCOME

Within 3-4 weeks after conducting the workshops, Centric will provide the results of the assessment, including:

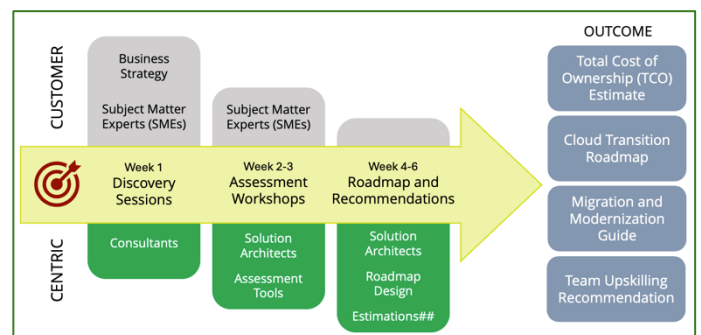

Figure 2: Shared Engagement Model

- A step-by-step cloud transition roadmap, covering modernization recommendations and plans for the identified workload migrations.
- A detailed cloud readiness report, including specific recommendations regarding additional required competencies and skills for the client’s team supporting the future mode of operations.
- A Total Cost of Ownership estimate that will help to create an optimized target environment and operations model.
- Transparent documentation including complete and comprehensive migration plans.

BENEFITS

- *A Viable Migration Plan* to minimize disruptions and align with their specific business requirements
- *Financial Risk Mitigation* through thorough cost-benefit analysis along with strategies to monitor costs
- *Minimized Risk* of downtime and service disruption through robust continuity planning
- *Data Integrity and Security*, maintaining compliance and protection throughout the process
- *A Knowledgeable Team* with a plan to build the required skills through knowledge transfer and training
- *A transparent process* enables clients to maintain full control of the transformation and to take informed decisions independently throughout their cloud journey.

These benefits collectively provide a solid foundation for a successful, secure, and cost-effective cloud migration tailored to your organization's unique needs.

WHY CENTRIC?

- With extensive experience in managing cross-border transitions, we know how to handle complexities like strict security requirements, demanding regulatory environments, and various cultural differences.
- By staying one step ahead, we anticipate potential issues before they arise, ensuring a smooth and secure cloud migration process - we always have a Plan B.
- Our approach leverages Continuous Integration and Delivery (CI/CD), Containerization and Kubernetes, Infra-structure as Code (IaC) and other DevOps practices, adapted to the culture and the people within your company.
- Our unique advantage lies in our blend of traditional IT hosting expertise and modern cloud technology skills - delivered by exceptional Centric talents from the Baltics and across Europe.
